

SE 654 373

inhabited 11.9

ENTERED

12.9 young, abundant Leptotheca hairs up to 200 x 19

spores + asci imature, h. separate 96 x 26

(17.7) x 11.2

✓ Annula?

but check when older - looks like very few asci often only 5-10
Suckles only 3. OK

14.9

Sporomella

tiny papillae

spores in chains

4 celled

55-38.5 x 6.5

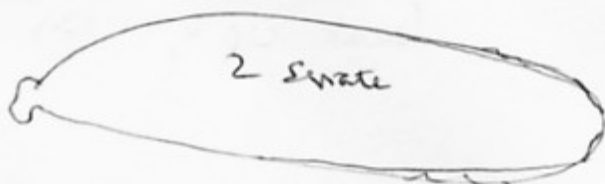

g.s. ± linear - v. slender

to 10 asci seen - check Pressure?

very difficult to see any pseudocidal marks

< 100 diam

Asci 96 x 22.5 short footed

pseudo brown, darker outside

Minima, but spores on large side?

35-37.5 x 7.5

26/9

✓ Cephus terreus

7.0 15
7.5 2

tiny being imaged Potropa?

✓ Sarcobolus

tiny papillae

hyaline viduaceus

s.a. 40-38.5 x 16

35+2

Asci 96 x 12

spores v. dark

but ± smooth

residual

✓ P. excentrica

imature

setae 95

spores 25.3 x 19

been flaked

14 16 x 6.5

4/10

C. stercoraria

Small parasitoids, but spines not visible
35-32 x 6.5

9.10

7

P. excentrica

plenty

Secochorus versicolor

15.10

Phaenatopus

coprophila

lots.

P. excentrica

(no setae at vertex!)

20.10

Phaenatopus

coprophila

25.10

P. coprophila

beak up to 125 x 30 @ base

28/10.
