

X 845541

ENTERED

20.11 P. lobatus ✓ pale ellipsoid 9.5-11 x 6.5
crystallines (sl. large)

24.11 Trichobolus ✓ stercomis asc. 225 x 150
-320 -190

1.12 Trichobolus ✓ Spores 10.5 x 8-8.5
broad ellipsoid.
Setae 500-340-385 x 13 at base. walls up to
3.5 thick at base. Spore up to 6
330 diam Zukalin

Vienotia frumida ✓

T. stercomis ✓

13.12

21
2 Immature pattern large 600-700, ~~to 600~~
semimixed. Small rough unagglutinated setae
ca 65 long with tiny spines. 1mm asc. 260 x 40, clavate, filled

14.12 Cap. stercomis ✓

3 Large spiky perithe (if 2,21?) ca 600 unable to
find any details - too immature. going to be
very multipored?

Ascobolus ✓ small roughly linear ornament
16-18 x 8 Cervinus (check better material)

epispore cracks not extremely crowded +
spores too small for ornament?

23.12 Large Spotted peat
 23.11.15
 16.18.21
 600-700 spores
 no spores at week

Milk-fused Spores 14 x 8.5 appends
 Young Spores 22 x 12.5 14 app 16-17 x 3
Podospora Ca 250 spores

Native same size. setae up to 130 long.

Ascobolus Spores 16 x 8.5 albidotype
 asperata v. pale / white - yellowish - ~~causis~~

Lasiosporium Spores to 355 - 550
 asci all imitate

Semi immersed asci clavate - leave to be rare
 native. keys at to farinosa

2.1
 2.3
~~Cop stercoraria~~ Spores 21-19.3 x 11
~~Trich zelandicum~~

Spores 22.5 x 9.5 Ascicula 190 x 14-15
 irregular cell walls leaves to 550 hyaline s.m., but
 St. S. under steam Citric

21st Anniversary

Ascidium

white when young, 340 - 700 - 1000

herbaceous, pale brown / white when
mature

Asci ca 210 x 16

Spores 18-16.1 x 8-9 close-distant cracks

Paraphyses simple, not cristate Cervicaria (sl. large spores) 3 diam

Excipulum hyaline, parenchyma 12-25 smooth

Some misformed giant spores

Very slight indication of surface near round cells < 400
definitely asymmetric, rather lateral occasionally
pale gel, what is big as spore.

imagine asus apex contents purple in KI

agrees with desc of A. saccharifera
van Brummelen.

31.1

Cop ~~stetanus~~

Leishmania 22.5-24.1 x 9.5 (Spores with
irreg gel streak)
Asci 19 diam. Ciliates

Ptoospore v. multispored female below

Semi immersed or rare with rigid setae
at neck < 100 long.

immature spore ca 16 x 9, with 14
app ca 12-15 long

Sutose ✓ or tenosila ?

Asc. Seice.
around 9.

24.1 A few A. saccharifera collected

30.1

Dried 30.1
