

Rehder St Abbs Head 31.3.97
NT 909693

12/97

2.4

Delitschia

54.5 x 22.5

heavily constricted @ Septum,
~~tristoma~~ ? of foramen?

st tapered towards apex

Sporomniella

immature

4 ER

54.5 x 12.5

internode

5.4 Sarcobolus

lunate verrucosi

Sm 40-42

versicolor

Delitschia

perfecta ± completely immersed

48-53

x 21-22.5

gel sheath

ca 25 wide

Spores sessile

longitudinal

perm slit

asci

29 diam

transverse

Septa

st.

constricted

?

9.4

Schizothecium

4-spored

19.5 x 9.5

teliospore

Delitschia

50 x 22.5

Asci 38-40 diam.

only occasional hint of brevateness.

Perithecial body deeply embedded + attached to substrate

Only stat, hairless neck

probably ok for fulvacea

Sporomniella

~~delimited~~

discolored spores

4 ER

46.5 - 51.5

13.4

Schizo.

18 x 10

8-spored

versicolor

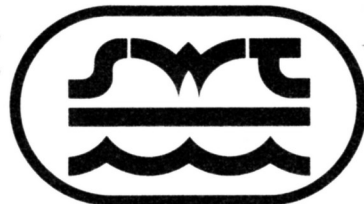

x 8-12

Sp. internode

21st Anniversary
