

Mountain Hare Cairngorm 26.5.97

27/97

NJ 0004 Martin Gregory

1.6

Trilebia as us 210 x 160 ✓ Stercor

Sporomella 4 ER 42-46.5 x 8-8.5 arshahis

5.6

lot of snow grows white mycelium on ca 50% pellets

Podopar repeatedly laying all over
of appendages still young ca 300-350
leaves up to 6.5 ✓ pale at tip Stran

9.6

21.6

Reltschwa ^{-59.5 -19} 51-57 x 16 not very
condensed or oblique, st. pointed at tips Chelonioides
check whether hairy? yes white conspicuous from neck

± unisexual, tends to barbe up in middle.

Asci 38-40 diam, gently tapered below ca 400 long.

Conochele Spiky all over 14.5 x 11 x 6.5
Setae 40 ✓ Urmara

Sporomella 4 ER 48 x 9.

leaves ca 1.5 diam, not conspicuous under mic.

tanabensis?

266

Comochaca

12.8 x 9.6 x 6.5

LegnaraBrown warty cerophora? Sprs 27-29 x 12.5-13

clear round 24 appendages approx. 14 collapsed 6x3
 to show apical areas change. Some P. app. type
 hairs also near neck apex appendage OK

Probably not cerophora - spores elongated
 but not strictly cylindrical when young -
 becoming fixed.

30.6

Con. LegnaraReitsche

54.5 x 19.5

rounded ends, straight

Septum, not strongly lobed white hairy

Pod app.

(Reitsche agrees with Trichostema revised)
