29.6

6.7 white knotted pentamer

immature Sporosaccus 4+ celled?

(this is perhaps a var. hairy and

bifurcate - 8 spines might even be a
leptospher? ed cells larger, fused.
ca 40 x 45?

16.7

Conochorda

11.2 x 8 x 5

hymen

hr with white knotted - or epimycosis? ✓

24.7

Chordata

500, 550 diam, black, immersed

long stalked clavate asc. immature Pteris?

Ascs stalks ca 65 long

Spores 4-celled, not than 4 celled S.-celled

us - 54.5 x 6.5

central cells slightly broader than rest.

Diagonal germ slit

apical cells slightly larger

than the rest + slightly tapered

NOT Pteris (8-celled). Keys # to Sp. conopsea

hr too narrow + no ostiole?

4.8

Con. high
