

Mountain Aire Cairn on Crater Crater 28.5.97 47/97

NH 998074

9.6 Sporomucella 4ER 45-48 x 9 anastomosis

Telebites rams

21.6 Sp. 45 x 7 4ER. sac basal cells larger than rest. Degrad g. slit. anastomosis

Unstained asci 160 x 21

3.7 Sporomucella 38.5 anastomosis

White baroque perithecia immature. dominant?

Podospore apicalata

Imm Coniochaeta lignaria?

Imm Hypocrea ?

11.7 Xylosphora

Hypocrea still immature

P. apicalata

Coniochaeta lignaria

12.8 x 11.2 x 64

"Sord/Polyspore"

(cf 28.97)

6.5 x 4-4.5

Asci 160 long.

35 diam.

expanding in middle to

C. Länzerii

OVER

Sp. anastomosis

"Sed poly" with Setae perithec

OK - must be C. Hansenii ?

Setae up to 90

Asci 145-160 x 22.5

Spores ~~8-10~~ 7.5-8.5 x 5-5.5 x 3.8

gelm 3-4H perit and edge.

Check Spore number 64 + = 128 ?

Asporidium ? amp.

23.7 V. good Hypocrea

24-26 x 12.5-13

st. filled on one side

black velvety strome ?
g. slit 16-18

Coniochaeta 16 x 11.2 x 6.5

Setae up to 35 signature

Sporosmiella

4ER

41.7 x 8

abstracts

Asporidium

ampillate lams (< few), sp 32-35.5 x 16-17.5

4 spp ca 79

st large spored
ampillaceum

C. Hansenii

23.7

4077 ~~Con. hansenii~~
~~T. hansenii~~
