

31.7-

4.8 - immature white apothecia?

6.8 - still developing

10.8 → going yellowish green (are now unovs
of finera)

immature irregular ellipsoid spore present.

15.8 not growing well - overgrown.

21.8 Sporomucella 4ER 51.5-55 x 9.5

intermedia

Asci ~~2/10~~ x 26

Large, aggregated v. firm perithecia. Immature. lots of
short papillate 'sebs' and necks, lying mycelial below
Schizothecium / Cercothecium?

26.8 not mature yet.

30.8 " "

Sp. intermedia

5.9 " "

9.9 Hard round perithecia, with immature immature contents,
in web of grey mycelium.

16.9 Sp. round, hard pseudotecium, 500 diam

Spores 57-65 x 6. ⁻⁶⁷ diagonal germ slits

(14-15 celled, cell (6-7) larger than the others

tapering asci, 210 x 20 same spores fragmenting

SLIDES

polymer

14 celled spores, relatively infrequent, slightly shorter,
e.g. 55

20.9 V. imitator 15-celled Sp. (from middle pellet)

29.9 Sp. 15 celled 67-70 x 6

Three 29.9 with Sp. 15 celled
