-44

unstab asc' (10-120 x 22-23

Australia

24.10 Pilaira naevai ✓ Spores colorless 10-14 x 6-9

28.10 Thelobrya sericans

Piphocephalus dry paired from spores

head cells spherical
6-7 diam

Spores 3-3.5 x 2

ochromia alternately close & distant i.e. ±
'antrichotomous'

Lepidura

6.11 Schizotecton S. sp 1-2 serate (9-19.5 x 11-11.5)
Small scales slightly vertically ridged.

Schizotecton very like those above, but
with fewer scales - just a slightly darker

Papillate not Asc' pith spred, ventrally clavate
ca 125-130 x 50. Spores sh pip shaped or
ore ed 5-5.5 x 3

apical g.pore 10 appendages in water

to axis apical strobil

several hooked spores brown at first, then dark grey/black

Penicillium ca 90-100 x 65-70 check - smaller than ascs?
[Check records - same as 23/97 131/97 137/97 Sordaria polyspora
Thelohar names 30/98 101/98 - sent to Lurdausk
- reply?]

Thelohar stetocera

Coniochaeta polymegasporea ✓ Crown of Spha at
outside up to 40 log.

Spores 12.8-13.5 x 10-12 x 8

Asci 64-spored 140-150 x 40

clavate friform

Sordaria broad spored, 10 gels 22-23 x 14.5-16

← or very thin

Asci 210-220 x 20-25
