

1.6 Vermotidia fomicola ✓ T. polyspora ✓ clavate

Telephora stercoraria ✓ asci 95-100 x 10  
spores 7 x 3-4

Pilarea unguis ✓ sp. pale ellipsoid 10-11 x 6-7.

6.6 Sordaria sp. broad ellipsoid 19-19.5 x 16  
-22  
asci 25-26 wide

thin irregular gel present on  
2 forcibly liberated spores check later + distinguish from humana ✓

T. polyspora ✓ Small perithecia ca 125 diam

asci 45-50 x 10 ± cylindrical, but expanding

if Sch. tetrasporum to 50 wide at maturity.

8-sp, uniseriate sp. sl. limiform - tip shaped.

with apical sp. 6 x 4. Perithecial

wall densely walled, brownish - Sch. zosterioid.

[Same Sch. zosterioid scales present - not

sure whether belongs to these or to a young ✓  
topped Sch. perithecia.) check "Sordaria minima"?

12.6 Xylophora mycelium ✓ Sch. tetrasporum ✓ sp 20-21  
x 11-11.5

T. polyspora ✓ "S. minima" (H)

sp 6-6.5 x 3.5-4 (ooooo) 45 x 11

28.6 Cap. stercoraria ✓ Sch. namii ✓ 4-sp 11.5-12 x 6.5-7

Asci 9.5 x 12

Xylophora Shrankii ✓ (Xylophora) clavate sp 19-19.5 x 11-11.5  
apical 1 small 6.5 blue.
