

write id - moss present. (Splachnum?)

30.6 PU Conocheila Scutigera? yes
 8-sp. asci (25 x 16) sp. 19-19.5 x 16 x 8-9

4.7 OW Sch. concava?

14.7 Con. scutigera ✓

21.7 Con. scutigera ✓

27.7 Immature Acetabularia - long hairy - hairs
 < 1000 long immature leaf margin only v. sl. toothed.
 ca 60 x 25

Con. scutigera ✓

Moss leaf 3 mm long x 1.6 wide

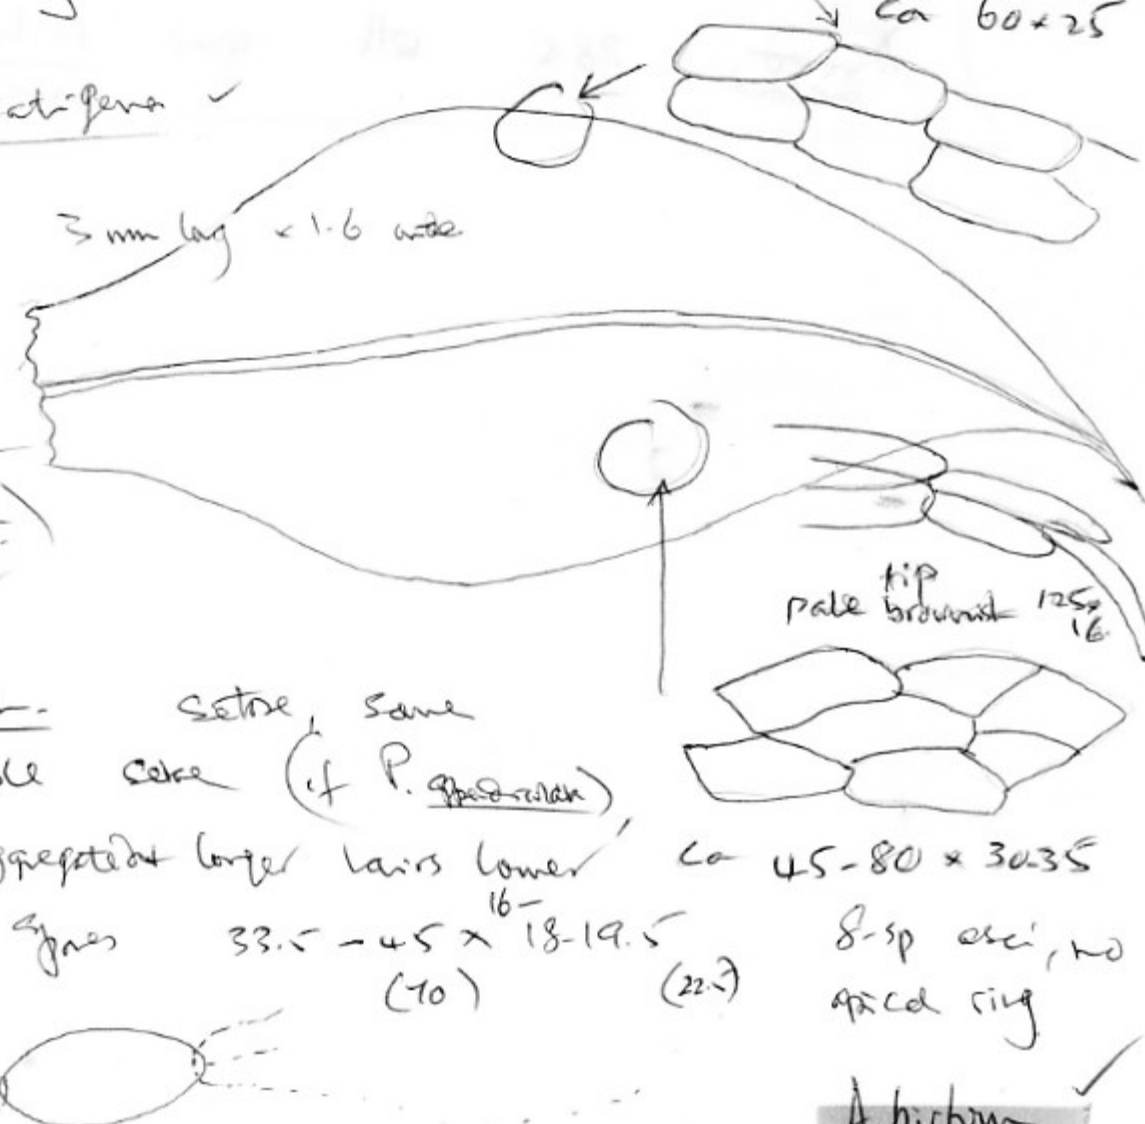

Splachnum
arcton
 (= sphaerium)

21.8 Arcton. setae, same
 with only simple setae (cf P. quadratum)
 Ather aggregated larger hairs lower
 down - spores 33.5 - 45 x 18-19.5
 (10) (22-?)
 ca 45-80 x 30-35
 8-sp asci, no
 apical ring

A. hirtum ✓

Arcton with cancell web, ca 80-100 x 70-80

PU

Con sectigena ✓

A. hibern

perithecia pyriform, semi-immersed,

up to 800 μ m diam \times 1.2 mm high

Asci expanded to 55 wide, \times 350-400 long.

28.8 Amion spores smaller 22.5-24 \times 12.5-13

but ~~others~~ 35-42 \times 19-20.5 hibern ✓

~~Dried~~ 28.8 with good A. hibern
~~is coded~~ saved.
