

8.3 ✓ Thelobius polysporus Myascel.

Pilobus spores pale ellipsoid. $9.5-10 \times 6.5$
 $1.5-1.7$

moreaui

14.3. T. polysporus ✓

Pilobus sp pale, $11-13 \times 6-7$

yellowish on vesicle

moreaui
crystallinus ✓

Ascozonus monesart

spores vesicle 51×38

Asci $110-115 \times 55-60$, with clasping spores.

checked with original description.

Ascidium brassicae

immature spores still

lycaline + smooth ?

19.3 Coprus stercorarius ✓

Ascidium brassicae sp 9-10
Asci $160-190 \times 20-24$ ^{2mm}

T. polysporus ✓

Ascozonus monesart ✓

Schizotheca lampyris ✓

good scales, 4-spored

sp. 23×12.5

Sacc. vesicular ✓

sp. vesicle $3+3+2$ 39×14

20.3 Cop. cordisporus? developing

Asc. brassicae ✓

T. polysporus ✓

see over :-

Asc. albidus ✓

Sch. tetrasporum ✓

Coprus St off white spherocysts on
veil. Veil^(ring) [zoe just below cap. Spores
but mitriform 8×4.5 ○

possibly 3-spored basidia. yes!
rather large for C. adsporus 6 mm before
expanding tetrasporus

3.4 Sch. tetrasporum ✓

White almost globose cleistothecia —
no great divisions toward structure.

Spherical free asci globose 8-sp
12-13 diam, Spores hyaline ellipsoid
ca 5×2.5 apparently smooth ✓

12.4 Sch. tetrasporum ✓

20.4 Sch. tetrasporum ✓

5.4 Sch. tetrasporum ✓
