

6.4 - 11.4 - 23.4 -

30.4 - 19/5 Sphaerodes / Melanospira

Shiny masses of black spores extruded from  
globose ~~text~~ < 500 diam. No beads noticed?  
No hylariae seen?

Spores mostly symmetrical limoniform, some  
± flat on one side, smooth but with  
a prominent g.p. at each end

38.5 - 48 x (16) 20 - 26

Archi clavate, 4-sp? ✓ ca 70 x 40

Spore ads like Sphaerodes, but  
pattern, size + no. of spores/cscws do not fit  
any in Cannon + Hawksworth (1982)

265 Clearly ~~Archi~~ clavate, but no neck or setae  
visible. Distinctly 4-spored ascus + hylariae

Some very small Pod. app.-like perithecia?  
nothing in them..

10.6 P. oppidicicola Or native spores

2225 x 12.5-13

Dioid with Pod +  
Sphaerodes
