

Sheep/goat. Head of Barranco del Chafaris, by LZ10 lay-by, 2/14
Haria, Lanzarote, Spain. N29.124; W13.515. 10.4.14. 593m.

Inc. 14.4

15.4 Sp. 4T (~~4T~~) 74-87 x 16 deeply indented

at Septa

unstak ascos 250 x 35

megalospora ✓

Sp. 4T disarticulating at Septa ad

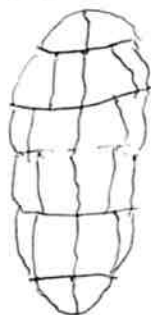

smaller than above

sp. 54 - 65 x 10

grandispora ✓

Pleospora large spherical theca 600-700 diam

sp. 38.5 29 x 12.5-13-14.5 -16
-32
-41

cf penicillus

22.4 Black Superficial, spherical theca 500-600 diam. Asc long stalked, cluste ps. 48-65 x 16

sp 4 celled 24-25-26 x 6.5

sp. fusiform, end cells tapered, intercalary cells shorter than wide Septa not oblique

Ascus 160-170 overall stalk below head ca 100 x 3-4

germ slits indistinct

Proevsicia fuscolata

theical cells polygonal 3-5 diam

see 35

Saccobolus 3+3+2 spores ± smooth, rounded

Sm 32 x 13 sp 12.5-13 x 6.5

Asc 120-130 x 22. pores by abax, not capitate

depressuratus ✓

3.614 Lophomys 19.5 x 12.8
KI +ve

corners ✓

Pressia sp. 24-25 x 6.5. distinctly

tapered end cells, intercalary cells shorter than terminal, ⇒ shorter than wide

spores cf. Lophomys, but too small? funiculate (short spores) ambalis ✓

Sp 4 ER 38.5-45 x 7

Sp 4 T 42-45 x 9.5

lageniformis ✓?
