

~~Asce~~ Egilsøy 29.9.94 (12)

14-1475305  
~~fung~~ marginate,  
but not toothed

Finaria? brownish-lilacish apothecia, furfuraceous 1 1/2 mm diam  
Asci 175 x 14  $\mu$ m when young, spores hyaline,

15-17 x 8-9-10  $\mu$ m  
-18

Asci not blue in KI

rim ca 180  $\mu$ m wide, entire

Paraphyses v. shi swollen @ apex  
no bottles in spores verruca

Mycorhynchus

perithecia 200-280  $\mu$ m tall

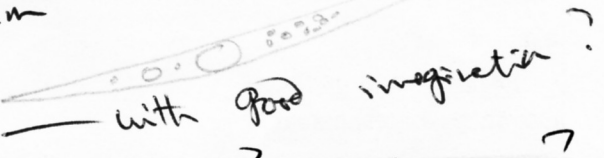

Pyxichlopora praei?

red 120-170 x 35-15  $\mu$ m  
base 80-85 diam

check spore length

Spores 50-55 x 5  $\mu$ m  
-60

no septa seen - 1 septate?

with good invagination?

Schroeterium curvula

$\equiv$  hispidium?  $\equiv$  concom?

immature, large, scaly

red imm spores 23 x 12 simple  
Asci 8-spored apothecia

no hairs seen

Chetynema ~~capitata~~ ~~Stenoma~~

Spores 20 x 11.5-12  
Simple paraphyses

brown, ~~woolly~~ woolly hairs

(check)

curvula

200-225 x 18

Ascobolus albidus

spores 21.5-23.5 x 11.5-12

see Eggsay

Coprinus Selmosi appearing Stellate / Pellucidus?

setles only Spores 7-8 x 4 um  
ellipsoid apical g.p.

Also long white lanthi Pseudovadshu?

Spores 10-11 x 6.5-7 apical g.p.  
ellipsoid with distinct apical g.p.

Shape smooth

Las. stans ciliator = papillator?

hairs 350 x 25-30 thick walled  
hardy colored. excipulum cells  
radially elongate 8-6 x 3 um

Spores 19-21 x 11.5-12

Thelobius lanus

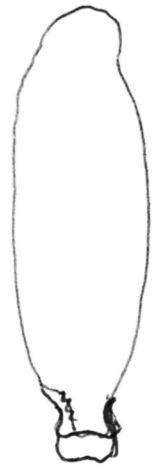

Also asci Coprinus / Thelobius 45 x 10

Spores biserial 5 x 3

asexual or similar? 6.5 x 4.

10 pores. small, pale apo.

asci 75 x 10

Sporomniella 40-43 \* 7-8

Spores with central apical cells

Legniformis (= ambigua?)

Coprinus unsei ✓
