

Rabbit Tentsmer 5.7.96

ENTERED 10/96

6.7

Sporangia? glucose immersed ca 150-180 μ m dia

ascogone 145 x 26 μ m

spores 6-55 (42) x 9.5 - 11
inset

intended

asci 65 x 30

7.7

Deltschwa 600 μ m diam

winteri

spores st. acute, hardly constricted, transverse
germ SW \pm vertical
Septa 6-67-70 x 29 - 30.5

Asci 32 μ m diam cylindrical above, tapering to long stalk.

ca x 600

Saccobdus

with lot of interascal mycel

spore red 42.5-35.5 x 14

Asci 115 x 32

yellowish \rightarrow under blue, reddish/purple sm
exciprum

spores 16 x 6.5 finely low
warty
citrimus

8.17 Glucose culture 3-4 asci. Aspiteria 120 μ m dia

Asci 120 x 32. Physiod. operulate 6.5 x 3.2 spore trichia,
ellipsoid.

T. - R. - C.

Rhizocarpus long

lateral dichotomous / very fine (irregular?) spore form? (2 spored - leaf-disk not certain). No head cells seen

22/7 Sphaerodes fumida ✓ = teleospora sp? (uncertain not recorded)

Vismoides fumida ✓ 125 μ m diam. neck 70 μ m long

Podospore Ca 500 glabrous grey/whitish web, blade web, no egg laid at neck, hairs 50 high below brown. spore, fexvats 16-spored decipias life 35 x 19-22.5 -38

25/7 ✓ pleurospora

White/whitish necks? 100 ¹²⁵ μ m long 50 diam, with hairs? ca 30 μ m long at apex cf. Rhizocarpus necks?

Schizothecium 4-spored 21 x 11 ✓ teliospore

— still present on 7/8 no spores w/ further development, growing on other fruit bodies etc

— up to 150 tall on 22/8 no further development, some growing perithecia etc "epimycetic" to P. 24

7/8

Coniochaeta

8-spored ✓
