

Rabbit Branch 7/7 ENTERED 11/96

12/7 Piptrocephalus 2m 3 spores

Sporangia with minute crystals. Stout 15m diam

St. brown finely striate largest - de - gant
6-7 x 4 floral head presencia? ✓

Saccobius versicolor

✓ Spores 16 x 6.5 spore mass 40 x 16
finely rounded 38.5 - 42

Sporomielia cylindrical, biserial 150 x 27

11.5 48 x 9.5 4-celled
even celled formally intermediate

Also Coprinol myrmecium

Asci 65 x 27 Spore 9.5 x 4.8

2nd clavate/ellipsoid

Sphaerodes 17.5-19.5 x 11 μ m black linear form

✓ finely

25/7 Sporomielia

37-35 x 8 even rounded
-43

arshalis

Coniochaete

200-250 diam. hairs < 65 μ m s. spred.
inactive

2/8 Brown skovatic

Conochaeta Spores $19-22.5 \times 16 \times 9.5-8$
Setae 65 ✓ Scatigera

250 diam x 400 tall

Large straw on one pellet, with large ca 500-750
penitence - immature (still inside 7/8)

7/8

Largely 1mike Conochaeta $11 \times 8 \times 5$
Setae < 35 -13 -8.5 ✓ Hyphoz?
8-spined.

Really Spiky Podospira

330 diam x 400 tall

hairs 7 tufts < 260 long

8-spined bisetate

11 Spores 81 asymmetrical

$33.5-38.5 \times 16-18$

primary appendage 16×6.5
Crumpled. No 2y appendages

visible - check in India Ink (cf. excentra)
(apical appendage visible on young spores in ascus)

Ascii 22.5×6.5

See drawing on 7/96

Sporangia 85-86.5 x 10 rounded equal celled
Sch. tetrasporon 21 x 12.5 intercalated
Prospora decipiens 8 spored 37 x 19

Conochaeta 8 spored Spiky tall one 45°
 in one, more typical in others
 13 x 7.5 x 4
 12.5 x 9.5 x 4.5 lymnaea

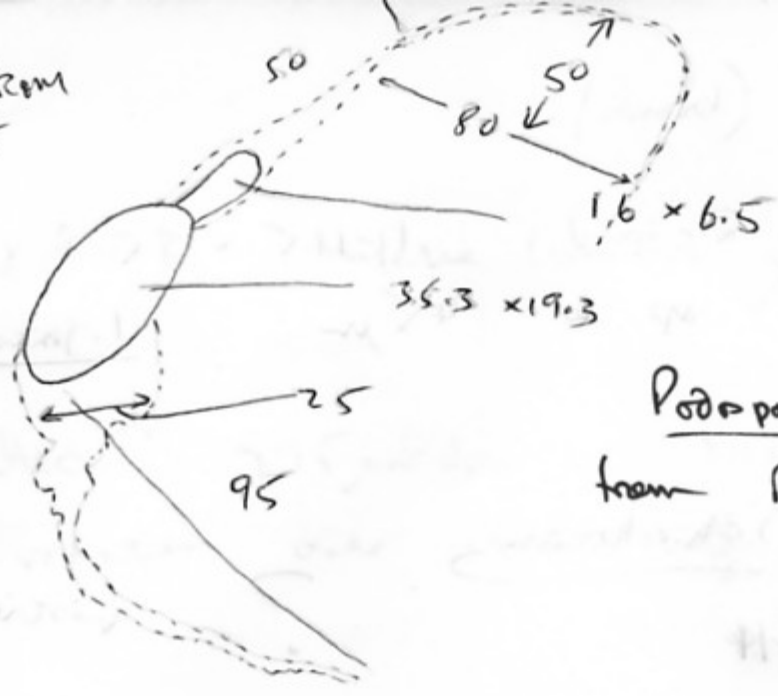

Hypocapsa 25.5-27.5 x 12.5-13
 -29
 8 slit ca 20 Planospore

v. Sl. flattened in some views
 phg blue - lot reddening

Lot of imbricate conochaeta. P. excentra still present
 Meas: - Asc: 120 x 12

10.5-12 x 7.8 x 4.5-6
 31/8
Dried 31.8
