

Piptocetrans dry Spores 5.2-7.5 x 3.3 (3-4 spored chains)
✓ head cell concave/flatt 15 μm diam

Sporangia brown 12-15 diam. with crystalline deposit not striate or only faintly so
no rhizoids seen Preseniana

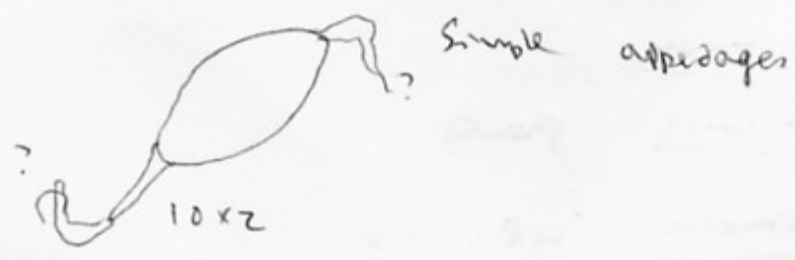

✓ Niemelohia funicola

11.9. ✓ Schizothecium tetrasporum 19.5 x 11.2

Sporangia Asc: broad/cyl, short stalked 150 x 25

✓ spores 4 ER, leading to break, esp at middle
43.3 x 8-9.5 oblong g.s. broad gel sheath
-45-51 rich media or autolysis

Schizothecium - no asci Spores 24.1-25.7 x 12.5

clades type perithecia present. no - spores too small

✓ Podospira 8-spored 36.5 x 19. P. decipiens

✓ Ascobolus immersus 67 x 32

16/9

13. White Ascholar w/ cleisthymenid

✓ Cephrims misel? spores ok

✓ C. sterzners developing

← young 700 diam & high.

smooth white excipulum

✓ Asci 290 x 20 Spores 22.5 x 12.5 4-6 cracks w/ pores hyaline no colour amylose (except spores) lays to albedo? etc.

✓ Podopura decipiens

✓ P. lobatus Spores 7.5 x 5.5 yellow en masse crystalline

19/9 ✓ P. decipiens

✓ A. immersus

25/9 ✓ S. laka sporum

✓ C. sterzners plenty

✓ Sporormiella 48.5 x 8

✓ I. conicus

4/10

Dried.
