

SE 109225

12.9. Very long, Spheroplasma P. vari? Sporangia not black, but remaining intact. Spores bicyclic ellipsoid 19.5 27.5 - 28.9 x 14.4 - 11.2 @ apex 64 diam Phycomyces nitens?

Piptocarpus brown lined, dry, 3-4 spored chains? Spores 6.5 - 8 x 3 head cells multilobed freshman

pure white Coprinus? developing - odd warty growth cap 1 mm tall - no its a young conium - others green

Delebicus ~~Stereum~~ ascus 290 x 190 (2)

~~F. vari~~ 160 x 96 small stere. (1)

flattened spore mass 128 x 144 3-2 layers thick? Spores 6.5 x 4.5 (1) 275 x 275 (2)

Schizothecium ~~Lehrspora~~ 21 x 12.5

25/9

Spiral lined Chaetonia immature on 3/9

S. Lehrspora

30/9

Coprinus ~~Stereum~~ 6.5 x 4 etc.

Shaggy lined Chaetonia also immature

hooked "Chromyces"? rosy pink

hooked hairs golden brown ca 125 x 4 (forked at base)  
further up to 180 & on

lots of tiny (2 um) spores hyaline asco? spores?  
hairs etc for Duxobolium in Ellh  
probably G. californiensis  
since color is too pale

Same slightly rough, 1000 x 300 spores present  
under oil 4.5 x 3

4/10 Vismetidia fumida  
leaves 900-950

Glyxobolium goes better, purple.  
Spores ± glucose, ~~possibly~~ veinose  
ca 3 & on.  
check specific identity.  
hooked hairs branched (rooted below)

9/10 Gyrocampa californiensis (= Duxobolium)

final part of ascus has aseptate,  
ca 100 um long

Spore chaetothecium elongate - cylindrical asci  
spores 806

Dried 9.10
