

Rabbit Castle Hill 26.4.97

21/97

NX 853525

24.4 Pilina 11-12 x 6.5 $\pm$ colorless ✓

moreover

Rhyssalus containing / poly spores

Asci 80-90 x 35-42 ✓ 3-5 per apo.

7.5 Pilobus 8 x 5 pale crystalline

Ascomas 1-2 under albae type spores. Sl. purple
run to young apo 22.5 x 15 ✓

Podospora type decipiens spores looks unspored check when
none available. 2 ✓ 16 spored plerospore

Schroeteria tetrasporum 21-22.5 x 11.5 ✓

2.6 Coprinus unise ✓

C. stercoreus ✓

Uredophanus cornus ✓

Schroeteria single apex 29-32³³ x 19-21 8-spored
heavy perturbation with only small Mr. scale
glutinous ? ?

Ascomas albodes ✓

Lesichia (on a leaf) Leaves single, up to
200 long spores 17.5-19.5 x 11-11.5
Asci 80 x 22 Conari

Long Stalked Structure - apothecium or conium?

Stalk 275 diam 4 mm long, brown below, pale above
head 800 diam

Spores $16 \times 5.5-6$ ellipsoid with 2
polar groups of small droplets. Obviously 1-seriate

Asci ca 130 $\times$ 10 KI blue pore

Pores imbricate, cylindrical 5

Lanzia coniculi ✓

5.6

Delitschya

very asymmetric septum

UC - 49.5 - $\times$ 19-22.5 very short pin
slit very long.

uniseriate

dryma

Protophoma

35 $\times$ 17.5

Simple app. 8-spored

flexuous containing

Simple appresses.

Papillate to insertion of hy appressor:

and 2-4 appressor simple, straight

Variable no. of opening spores / asci < 8 9-10
keys to pyriformis? OK

9.6

Inchoelitschya

21 $\times$ 7.5

bisporous

Setae < 100

Sch. vestitorum

17.5-18 $\times$ 9.5

Dried 9.6 Laschitschya coniculi Asci 130 $\times$ 30 OK
Asci < 200 Spores $19-19.5 \times 12.5$ beak
