Sporormiella minima 32 x 6 ✓

26.10

Rhyssomys tiny brownish (<200 diam)
~~psa~~ apo ± cylindrical asci
 ca 9.5 x 1.9 Ca 64-spined ca 6 x 3
 10-20 asci / apo

Cephus tiny pale <150 diam apo

8-spined asci ca ~~30-35~~ x 8-9 with longish
 spines hyaline ellipsoid spore 5 x 3 tapered stalk/basis

Peris not seen if "Ascothomus" cinnabarinus

1.11 White apothecia developing?

6.11 Volvetella cinnabarinus ✓

White Ascobolus Spores 11.2-12.5 x 6.5 bisetate

Asci 19-16 diam x ca 175 clavate, rather than cylindrical

under oil Spores ± smooth with few
 random cracks 12.5 13.5-14 x 7-7.5 still fairly
 Peris 3 diam warty folded small young

Carletonii ✓

Apo 600 diam turbinate 500 high.

Major Asci	diam	length
	21	160
	16.1	215
	19.3	190
	17.7	190

Paraphyses irregularly
 branched & fused, not
 cephalate or lobed
 hemispherical, as wide as spore
 Unilateral gel on
 Some spores, none at all
 in others only seen in II

Spores 14-14.5 x 7-8 bisetate

12.11
18.11

A. californi
Plent A. californi dried - up to 2 m
diam

white corrate structures, with
ampulliform cells on surface
50-60 diam ca 1250 long

clamps. very basidia present 4. spores
hyaline basidia spores 9.5×5

24.11 Conochaeta Setae up to 30

Spores $\pm$ ellipsoid $9-9.5 \times 5$
