

3.10

P. lobatus

Yellow 8-9 x 5

crystalline ✓

Sporomella 40x

45-54.5 x 10

intermedia ✓

V. fimbria ✓

6.11

Piptocapsa

dry

fresenone ✓

Cheekedaker

3.8 diam round smooth

breteltoii ✓

Saccharos vesicular ✓

Plaire monesui ✓

13.11

V. fimbria

S. vesicular

Piptocapsa

dry

floral lead cell, "dough de gent",

brown crystalline sp. place ca. 4 spores

fresenone ✓

Dehtsche

white unclonable

61-65 x 25-7

unshar ascs 410 x 45

obovately uniseriate, sharply casked to short stalk at base

transverse septum good sheath < 25-thick

winteri ✓

20.11

Helokales

up to 200, same on Schizospora

Sphaerodes fimbria

✓ anal g.p.

19.3 x 11.2

= Melanospore sp

Dehtsche

64 x 29

winteri

Sac. vesicular ✓

Schizospora

telasporum ✓

Ascaris apertum up to 2.5 dm,

Spines lined, broad 21×12.8 unilateral set

Sacculus "finger-like". Relatively few deep.

Para lips irregular, lined, no claws ✓
excl strongly furrowed probably ok for furrowed
(dried)

Ascaris small albicollis type apo
lined. $22.5 \times 11.2 - 11.5$ albicollis ✓

23.11 C. brevidens P. crystalline V. fimbria
S. versicolor S. phaeo-fimbria

Helicoides ✓ up to 275 dm
remained / hooked marginal bars 16-18 kg.

Asci 50 x 8 spines bisetate, imbricate, ellipsoid $6 \times 3-3.5$

No reaches in LT. not copulate?

28.11 Cop. stercoreus A. furfuraceus Sphaeria furens

Schiz. leucophaea

Sch. concolor 29×15 good scales 8-sp

Delitschia white tomentose at ostiole

$59.5 - 64.2 \times 25.5 - 27.5$

st. pointed apices

Winters

4.12 Sp. fimbria Asca furfuraceus - very pale 24×12.8
apo

Coprinus linariiformis 12.8×6.5 (looks like C. concolor
narrow apically)

Sch. concolor Helicoides

9.12 Ascidium pale 1-2 mm diam Sp. 21-22.5 x 12.8

Cracks not very crowded.

Ascid becoming brown 2nd diam. x 240 long
Pores not markedly colored or clavate 27. yellowish

Coprinus cf Cochlosporium - "liriform"

Leptotheca ✓

Selax penthaca Sp. 14. Sebe up to 320,

with single poly-spermed, verticose asci

Armin leporinum ? check when mature

ca 21 x 11 inches, but so 14 app?

Podospira decipiens ✓

asci barely thick in K₁, but spores almost
black and 1/2 inch spores + ascus catenae mycelia

13.12

Sch. conicum ✓

Selax penthaca poly-spermed verticose asci

Armin 2 appendages tapered "solid" ca 30 long
spores 22.5 x 12.8 ✓ leporinum

16.12

Cop Cochlosporium ? check spores when mature

P. decipiens

Sch. conicum

Yes etc.

18.12

Sch. conicum

(Dried 18.12)
