- 4 Small Schizothecoid perithecia with apparently dark upper part due to spores in asci in upper half of body. 8-spored
ca 10-200-210 tall x 110 Sometimes multiple e.g. 2 obliques (190 wide)
Spores grey-black ellipsoid 4.5×3 germ pr? Asci ca 4.5×6 cylindrical uniloc 1-seriate
No KI + structures at ascus apex.
No apothecia in H₂O w KI ✓

[8-spored version of 131/97 + 23/97?]

Also 32 spored Cephus / Tel / Rip. cyl / clavate asci ✓
spores $6-7 \times 3.5$ Asc 80-100 x 19

1.1 as above. Schizothecoid not so apparent
portion of peltar removed & dried

Also on peltar II perithecia 125×95

6.1 2 ✓ both Sord. minima - dried

13.1 White apothecia ca 140 diam.

Asci 8 spored clavate 1-seriate 60×10

Spores ellipsoid hyaline $6.5-7 \times 4.5$

Paras not easily seen hyaline conidia? Cephus ?

19.1

Sporangia 4 ER 30.5 - 32 x 6 uninucleate

Asci white

Spores 14.5 x 7 unilateral pd.

± smooth with faint warts.

Still v. young.

Cerebonii

K1 → purple.
not blue.

tiny white

Coprinus

flattened ap. 150 diam

Asci 55-60 x 9-10
- apex "domed" :-

Spores 5 x 3 ellipsoid hyaline

Paras hyaline, globose-capsitate
to 6.5 µm

K1 - JE

26.1

Asci Cerebonii - 2 red

Order, yellowish under the mic, but no brown
color in perithecia heads, after more v. little

Telephium microsporus ?

30.1

A. cerebonii

18.3

Cop. stercorarius

discoid - being eaten by larvae
