Margaret River, WA

Inc 1.11

2.11 Pilaira ✓ 4.5-11 x 6.5-7 ± colorless, st yellowish
en masse.
Sp. 1

4.11 Saccobolus hyaline, velvety ca 275 diam
3+3+2 sm 38.5 x 14.5 Spores 14.5-16 x 8
-42 st. rough, not cracked
Asci ca 90 x 25
versicolor ✓

7.11 imm. Coprinus? - white L 200 diam

S. versicolor ✓

11.11 S. versicolor asci 128 x 29 Spores 16-17 x
Smooth, but patchy in places as if peeling off
Smess. 42 x 16 PACKET versicolor ✓

Schizothecium 4 sp. 19-19.5 x 11-11.5
good scales. tetrasperum ✓

17.11 Hypocrea developed black velvety, ped. white
ref. as.

Schizothecium 4 sp. 11.2-12.8 x 6.5 poorly
developed inflated egg scales nanum ✓

Sch. 4 sp tetrasperum 19.5 x 11.5 good scales

Sporormiella 4 ER 74-67 x 12.5-13 tetrasperum ✓
-61

30.11 Sacc. versicolor ✓ Sch. tetrasperum ✓

Phycomyces sp. very uniform 16-19 x 9-10
pyriform conidia mitens ✓

Hypocrea still imbric - spores 22.5×9.5
-28

plug ballpoint clear blue in KI

several pentecia / stroma

6.12 Hypocrea black velvety stroma surface,
whiter around ostioles - several pentecia
1 pellet, grown by duxo, dried. ~~After~~ developing
on another pellet

(?)

Asci ca $250 \times 22-25$ uniseriate.

Spores with broad gel. $25.5 \times 27.5 \times 11-12$

germ slit fairly long ca 17-19

ellipsoid, not imbriculated.

sp. 1 /

Podospira antrache 64×29

Pod deeper ✓

Sch. vestitoria ? dark spore v. poor scales

Sch. tetraspora ✓

4-spored good scales $19-19.5 \times 12.5$

17.12 Another pellet with Hypocrea - not yet name.

Poly pentecial. Black velvety stromal surface, whiter
around ostioles as above.

Sch. tetraspora 4-sp ✓

Sch. vestitoria ✓ 8-sp. poor
Scales sp. 22.5×13

P. excentrica ✓ 8-sp. excentric spikes at neck

spores sr. pleosidiform $35 \times 16-17-19$
stat by $14-16 \times 6$

Sporomella 4 sp

61 ✓
-67 $\times 11.5-12$

ascus 180×35

tereti spore

24.12

Hypocopa ✓

black velvety polytetrad

stroma spores v. uniform 25.5-26 x 11.5-12.5
germ slit ca 16-17 -27

no sign of clear second cell - very
occasionally a small irregularity at base
of spore when immature in ascus.

Spores uniseriate, asci sl swollen in middle.
Pore clear blue in KI, not intense
ca 6-7 x 6-7.

PACKET

Sch. restrictum ✓

Sch. tetrasporum ✓

Podospore

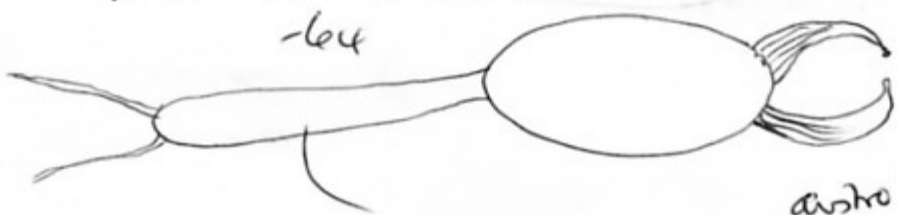

S. sp

Spore stalk straight setae or

hook (?) 4-cornute 2y apical app. striated

Spores 54-61 x 29-26
-64

biseriate

astrohemisphaerica

65 x 8

Sp. 4ER

58-61 ✓ x 11.5

? int
no other internodes seen

2.1.00

Stropharia primordium?

Pod. excentrica

Sp. 4ER

64-67 x 12

S.1

Stropharia ✓

relatives article 4. spred. Cap 5 mm

Stem + cap light creamy brown, gills visible
from top. centre pale grey Spores purple 4 spred

PACKET

ellipsoid amygdaliform - hexagonal in some

views

11-11.5 x 6.5

Podospira a few asymetric, single rennagg. setae,
Spores 19-19.5 x 12.5-13 ly app broad
cylindrical 12 x 4-5

Podospira broad saccate asci 128 spores?
ca 210 x 80

Aspergillus terrestris with more + evenly + radial setae
< 100 long Spores 22-24 x 12.8-13.5

bifida

Podospira excentrica

Dried B.1 overrun by myxo

Saccobolus versicolor
Hypocopa sp. 1
Podospira australis
Podospira austrohemispherica
Podospira bifida
Podospira decipiens
Podospira excentrica
Schizothecium nanum
