16-sp

35-38 x 22

Sch. tetrasporium ✓

19.5-21 x 12-12.5

13.1 Coptium uniser ✓

Hypocynra ✓

solving perithecia. Ostiole with

waxy 'flaps', striated/perithecial surface black, not benzene

Sp 23-26 x 12.5-14.5 g slit 16

Spores very slightly asymmetrical in some views. NO sign of 2nd cell SLIDE

Sch tetrasporium ✓

22 x 10-11

Pod. pleurospira -

14.1 Pod. pleurospira -

perithecia short & strongly

immersed, except for neck. 16-sp.

Sch. tetrasporium ✓

Hypocynra

single, black, perithecia with waxy

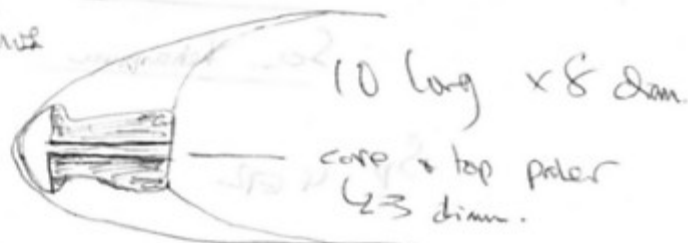

flaps at ostiole. No sign of basal cell in

major spores - some sign in young spores
Spores 24 - 25.7 x 13 - 12.5 g slit 14 - 15

poorly clear the 1st cell
spores evenly ellipsoid in all views

cf. hufeldii?
