

19.3. Laschows not very mature. Very broad,  
relatively short setae  $\leftarrow$  35 diam  $\times$  385 long  
Asc ca 210  $\times$  19. sp uniserial / partially biserial  
22.5-24  $\times$  12.5-13.

24.3 lanche Ascobolus?

ciliates ✓

13.4 Ascobolus branched  $\pm$  cylindrical cushion-like  
apothecia spores 29-32  $\times$  12.5-13 cracks in  
exoperidium numerous + indented  
peridium hyaline, branched st. capitata

apothecia small, up to ca. 500 diam, no  
margin fits brown fur of A. alb-dus ✓

as mentioned by van Brummelen  
Asci faint blue in KI, then purple distalward  
Laschows ciliates ✓

Schizothecium good seeds clear, plucky, but not  
very large. 8-spored sp. 25.5-26  $\times$  13.5-14  
ly app 8-10  $\times$  2-3  $\pm$  cylindrical Spores uniserial

Comium

Cephauros peridium 4 mm high  
Bosidia 4 spored NO fossil cystidia. Veil thinwalled?  
Sparse pilose epidermal cells surfaces with minute verrucose/  
crystal deposits. Spores large ellipsoid 9.5-11.5  $\times$  6

vermiculifer ✓

21.4 Sch. conicum ✓ Asc. albidus ✓

29.4 Coprinus miser ✓ 4. sp Spores correspond 8-9  
x 8-9  
x 6

Sch. conicum ✓ Asc. albidus ✓

3.5 Cop. miser ✓ Asc. albidus ✓ Sch. conicum ✓

Dried 3.5 with Sch. conicum +  
Cop. miser parva
