

11.1 Gregarious masses of Tellichers / Lypothrix  
 sl. brownish ~~de-shaded~~ apothecia < 115 diam  
 polygonal excipular cells ca 10-12  
 Ascii 67-77 x 25-29  
 -100 Spores ellipsoid - hyaline  
 7-8 x 3-3.5

64-spored?

Contracept?

Perithecia hyaline, slightly clavate to 4 um

P. laura sp. ellipsoid variable 9.5 x 7 - 17 x 10  
 pale - orange

7.4. P. laura Spores more uniform, pale 9-10 x 6.5

11.4 Tel/Lyp as above highly gregarious solely excipular  
 cells asc cylindrical clavate 80 x 20  
 polysperid, polysperid Spores 6-7 x 3-4

Two Different Species

1. Ascii 190 x 50 Spores mass 95 x 35  
 tangentially elongated excipular cells, ca 500 + spores

2 naked asc, several immature

Spores short fusine to ellipsoid  
 3.5 x 3 to 6.5 x 3.5 KI -ve

2. asc cylindrical 110-120 x 22-26  
 Spores initially filly ascus then in  
 rows near apex. 6 or ? spored.  
 Spores 8 x 4.5 ellipsoid hyaline  
 cleistothecium apothecia, gregarious ca. 50-60  
 asci  
 pale excipular cells 10-16

17.4

Ascobolus

29 x 12.5

pale superficial apothecia, not scurfy  
 laterally elongated excipular cells albidos

Ascobolus

29-30.35 x 16

superficial apothecia, broader than albidos  
 above skc toadst

Schizothecium tetrapnum

good scales

u-spored asc

Spores

19-21 x 12.5-13
