

Soot (?) Open grassy, Col de Serra N Costa Fr. 5/01
(361m)

9 April coll AM Richardson, M. Thaler. 42°47'N 9°37'E

incubated 23 April.

23.4 - 26.4 -

2.5 P. lobatus Spores small ellipsoid, badly colored - pale
5-9 x 6 CrySTALLINE ✓ yellow
enriched

Sordaria Spores with good clear gel oblong-ellipsoid
19.5 x 10

uniseriate - Asc:  170-180 x 12-13
Limicola ✓

T. lobatus ? ✓ Spores short globose 11-12 x 10-11

Setae - thick-walled, septate 190-220 x 8-10 at base

7.5 Sordaria ✓ P. lobatus ✓

T. lobatus Spores 7 x 9 to 10 x 8.5

Setae < 225

14.5 Coprinus stercoreus ✓
Cop. filamentifer group? } var. varietal

Cop. setulosus with sphaerocyst
on slope  so overall length
12 diam Spores ellipsoid

apple brown with eccentric gp. 10 x 5. Leptoneurus ? ✓

Tridobovus Spores 9.5 x 8, shorty but
distinctly ellipsoid.

18.5 Cap stercomers ✓

Pure white Ascomata exospore lined, 20 x 9.

Paraphyses: irregularly forked & branched, no internal

rigid. Asci ca 220 x 20

 apothecia ca 1.5 mm diam. exupling before
not scurfy, but with rounded cells? Saccharifera

Lascomata spores broad ellipsoid 19-20 x 12.5

asci 35 diam Sebe - thin < 160

Lim-wli ✓

22.5 White ~~apothecia~~ now 2.3 diam. Sl. scurfy,

with distinct cells ca 400 diam

Sordaria spores 19-19.5 x 10-11

check gel.

Sp 4 ER australis ✓ 4.5 x 8

28.5 Cap stercomers ✓ Cap. ved sphaerocysts/ scales

2 apothecia (white Ascomata) dried

4.6 Cap. stercomers ✓

Schizothecium vesticula ✓ 21-22.5 x 13

Ordinary scale

10.6 Cap. stercomers ✓ Sch. vesticula ✓

14.6 Cap stercomers Volutella ciliata? Sch. vesticula ✓

Sp. 4 ER 48-51.5 x 9 intermedia? ✓

20.6
