

Penang ~~Malaysia~~ coll. A.J. Walling 10.4.01 10/01
Pantai Cherating, Terengganu 103°E 5°N

incubated 29.4.01
30.4

Pileobolus sporangia deep orange spherical
Spores 12-13 diam Sphaerosporus ✓
thin walled.

Sordaria Spores ellipsoid, slightly
pointed towards base ascus 18-19 x 10-11

~~Penthetra~~ quite small < 300 diam
very thin or so gel. Small thin, but walled, in
rather pasty limicola

Sporomucella minima ✓ 4 ER2 halving 35 x 5

2.5 P.l. Sphaerosporus ✓ honey comb like lower
of spores on slide
10 x 8 = 11-12
= 117.2 x 93

7.5 Coprinus initials reddish sphaerocysts - rough
remnant
Some elongated and compound elements

Sordaria Sp 18-19 x 12.5 fuscata ✓

Saccobolus very small apothecia < 200 diam

3 + 3 + 2 spores purple, very rough exospores, rounded
Sum. 32 x 13 spores 12.5-13 x 9

asci 9-110 x 27-25

→ contacting somewhat ac for removisporus ✓

14.5 Coprinus 4-spored, no focal cystidia
 reddish seble / sphaerocysts Spores dark,
 ellipsoid 11.5-9.5 x 6.5-7.5. cap. Seble capitate
Cp miser Sord. fimetaria ✓

Psilocybe blunt brown Seble at neck
 8-spored, trashcan Hecium below, neck naked

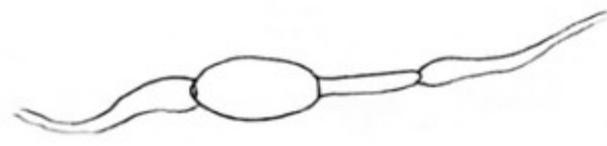

Ascobolus imersus 8-spored, spores 51-55 x 29

Saccobolus immature yellow 4 x 2

→ imbricat opening of spore. dark body 21 x 12.5
 vel. large by appress. ca 25 x 4
 no ascus apical structure. base.
 spore almost cylindrical at first (not smooth)
 thinner like Cercopora 2y app simple? at apex

18.5 Cp miser - Asc imersus ✓ Sp. minima ✓
 nasal?

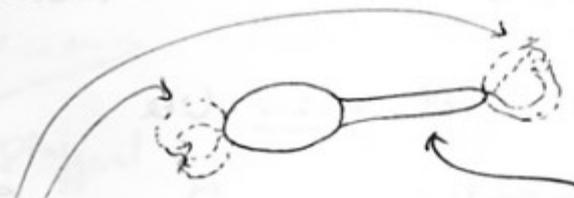

Psilocybe as 14.5 sp 29-32 x 13-14 pedicel ca 20-25

Saccobolus 4 x 2 Spore walls 46-51-54 x 17-18
 spores head truncate smooth 19-21 x 9 ✓
 yellow pores hot capitate. Chrysos

22.5 Coprinus / Cystidia / Capitate. / setules, red sphaerocysts, 10 faint
 sp ellipsoid 11x7

Podospira / appressed-type setae
 variable / varying to 1 / spores in / ascus.
 8-spored.

24-26 x 13-14

29-32 x 3-4

* Single - at first looked double due to curving.

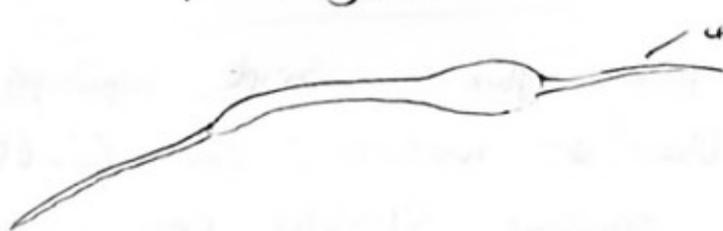

28.5 Cop. miser ✓ / Cap. red sphaerocysts/setules

Yellow Saccobolus / 4x2 / 15x19 / Citrus -
 spores smooth, broad, sq. truncate 19-19.5 x 10-10.5

Cercophora sp. conical neck, with a few short,
 non-inflated, non-agglutinated setae

mature spore head 16-17.5 x 9

Asci very narrow at upper half. 11-12 diam
 no apical gleba.

immature spores ca 50
 long.

Podospira as above

3.6 Cop muser ✓

Cp. Schlossi / Sphaerocysts

Spiky edge immature pentacem? several spines of aggregate, non-inflated hyphae < 300 long

Copius spores ellipsoid St. After g.p. no nail?

9.5-10 x 6-6.5

9.6 Copius no nail, but not muser-like

Spores ellipsoid triangular

9.5-10 x 8 x 6.5

Spiked pentacem still immature. Sp. minima ✓

Pod. decipiens? S-spored spores 26-29 x 16.

Spores small. neck papillae & spine appendages etc = arropitrensis ✓

Pentacem Zygoperrella? 2 celled spore

45-48 x 12.8 - 13.5 - 11.5

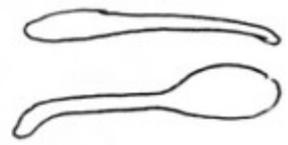

S. spored. polar perm pres. Single appendage. St.

wax firm-gel like or matrix, ca 60-65 x 5

no striations to appendage. Slightly cross wrinkled near insertion.

Tricem spherical, translucent ca 550 diam, with dark neck. ca 180 x 180. No setae.

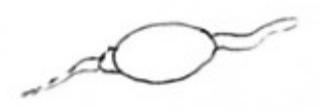

Cercopora neck dark, St. region ridged, with
 short erect, simple setae $\lt ca 25$
 no apical globose \rightarrow ascs
 numerous spores $ca 55$ long
 mature spore heads $13-14.5 \times 7$

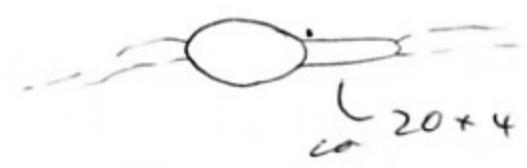

15.6 Zygosporella $45-58 \times 14.5-16$ translucent, spherical
 thecium dark neck, no setae sp. biseriate
 Phragm cells $\lt 10$ no structure to Zy app.
 ca 90 long.
 Asci $ca 250 \times 45-50$ insignis with setae?

20.6 Zygosporella ✓ no setae on one perithecium.
 some very short setae at orifice of
 mother $\lt 12$ long spores 52×16
 -53

Podospira Spores $22-22.5 \times 11-11.5$
 $ca 32$ - spored $\frac{3}{2}$ distinct black neck/orifice,
 no hairs setae

Podospira / Anomura? 8. spored. $25-26 \times 14.5$
 few short setae at neck $\lt 60$

$ca 20 \times 4$

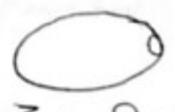

26.6

Coprinus
4 Spores

Setles on cap up to 100,
6 diam, cepitate to 11

Spores dark, ellipsoid 9.5-12 x 6.5
with sl. excentric g.p.

Cap small 2-4 mm diam
cuticle of spherical cells < 30 diam,
also some smaller, rough brown elements
- spores
cuticle ✓

Coprinus Lager - Cap < 5-10 mm. Spores
triangular - hexagonal

9-9.5 x 9-9.5 x 6.5

(as 9.6)

from smooth cap prothec. pale cream, vol
as orange as typical C. winter

Zygosporium ✓

no setae. Appendage simply hollow

Sp 55 x 14.5

Pentameria

ca 900 high x 600 diam

Line dark neck 340 x 90 diam

Cerophora

appendages 30 long. Make dark cell

asci with no apical plate

16 x 9.5

head with no setae or inflated cell s/scales
- just dark orange. but fits Coprophila ✓

Setae perithecia - immature Podospora ?

3.7 Zygospemella ✓ no setae (3 perithecium)

Podospores

Spores 22-23 x 14.5
-24

Commons ✓ ke + ve

11.7 1. Commons ✓

Zygospemella ✓

Spores 48-51.5 x 14-14.5

asus no apical ring.

No setae (3 perithecium)

24 apodages soon smelting + not very
visible, apart from proximal 5 μ m, which
retains canal structure. ca 125 overall length

Podospores S-sp 4 secondary apodages each
at Spore apex + tip of ly.

Sp. body

29-32 x 17-19

ly app ca 24

Commons ✓

Podospores

32-spored?

perithecium with both

P. dec-type hirsutes + inflated cells forming

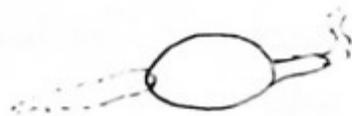

st rigidity.

Spores

21-22.5 x 11-11.5

Spore primordium

dumbbell-shaped

— difficult to make
out ly / 24 apps.

Sporangiella 8 celled ^{spore} cells about evenly distributed in rows. 115-120 x 16
germ slits around cell

cf Platymera? heredia

16.7 l. carnei ✓ Pod communis ✓

237 P. ~~carnei~~ immersed trichent body, dark long red. No setae ca 600 diam, wide ca 400 overall height ca 1200 no setae Zygosporella ✓ Pod communis ✓

Sporangiella 9-10 celled (see above) v. castrated at apex conical apical cells layer than broad others broader than long 128 x 16

one 9-celled spore with large 4th cell 18 long x 22 diam whole spore 116 long 8-celled spore 3 rows largest.

11 celled spore 138 long.

12 celled spore 147 long Ok for heredia

307 Sp heredia ✓ 10 celled 125-132 long thin with trichent base ca 40 diam, dark red ca 200 high x 140
8 celled 99
9 celled 115

P. communis ✓ also noted redced physalid Podospore ca 20 x 9-10

Z. insignis no setae

~~Pentacum~~ very setae (if excubica)

29-32 x 16-17

8 sp. but size + number
integral?

Asci clavate, no special structure

Setae of aggregated, non-inflated hyphae < 260 hy.

7.8 Pod communis ✓
