Pilobolus

small ellipsoid pale spores
 5 x 5

crystalline ✓

lenticular Tricholoma (Tricholoma)?

no setae

seen spores ± globose, walls thin
 ellipsoid 8 x 6.5 ?

27.5. Both setae and non-setae discharged
 apothecia present

Spores all globose-ellipsoid 8.5-10-11 x 8-9.5
 setae poor, sl. thick walled < 190 long
 sl. elongated at base, septate.

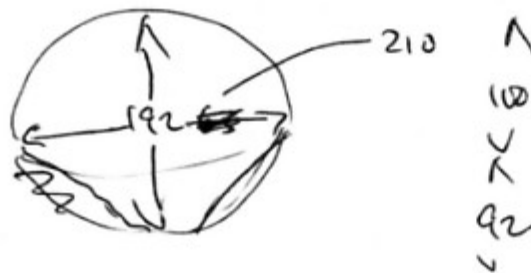

approx count of discharged spore mass on lid:-

- ① monolayer 180 x 93 (± ellipsoid - fairly small)
 ca 200

zirkalin ✓

packed patch 16 spores = ca 32 x 32 μm

②

122

③

smaller patch. ± perithecia
 (ca 200 or ← envelope in
 case)
