

2.7 Sp. uer immature 77-80 x 16
megaloforma ✓

Cheilymenia non-rooted, non stellate hairs
rimsd border of cells at edge of disc?
100-320 long. Ascii ca 160 x 16.

Spores oblongly uniseriate 19.5-22 x 11-11.5
anther, better antherium ascus 190 x 26
Setae < 420 long x 18 at base Spores 22.5 x 13
septate, acute. Pitcherium?

Lasidiales 27-27.5 x 12.5-13
-29 broad ellipsoid, red
no antherium. ruher? frond-truncate
setae < 210

Schizotheca ♂ sp. Por Scales 19.5 x 9.5
vesticolen ✓

4.7 Cheilymenia

10.7 Camarospora scutigera ✓
19.5 x 16 x 9.5
setae < 10 long

Sch. vesticolen - Cardisporus?

16.7 Cap. ~~strobilata~~ brownish sphaerocysts Spores
triangular pentagonal. 7 x 7 x 4 

Elm. vesticolen P. decipies ✓ ♂ sp
34 x 17.

23.7 Cephus ✓ as before. No scales

Sch. vestigata ✓ Con. scabrigena ✓

Cheilymeria ✓ very pale apothecium, brownish scales
300-400 x 16. Not or only very simply
rooting Spores ellipsoid, 20.5-22.5 x 11-11.5
1-2 separate Asc: 22.5 x 30-32.

Pores smaller at apex up to 6, not
filled with pigmented contents.

30.7 Cephus ✓ as before ✓ Con. scabrigena ✓

Cheilymeria ✓ as above (23.7). Apothecium with
line of 87. elongated rounded cells
scales to 480 Sp. 21-24 x 12.5

7.8 Cephus ✓ as above Con. scabrigena ✓
