

30 Aug. 2001. 46.65°N, 91.39°W. Incubated 20 Sep.

21.9 -

25.9 P. tuberos (P. tenu) developing

27.9 C. sp. Schlossi Schless acute < 110-130  
4. Spores, no facial cystids 9-10 above

Unexpanded cap 5mm tall, wide rim fibrous  
cream, st. brown on top swollen base, which is 16-18  
< 17 tall. Pellvredus Qan

P. tuberos umbrinatus - small hyaline sp. 6 x 3

28.9 Cap. expanded to 13mm diam

Spores narrow ellipsoid, eccentric g.p., 9-10 x 3.5  
OK for Pellvredus

2.10 P. tenu apothecium developing, fur traces

C. sp. reddish Schless with spherocysts  
Spores? check @ when some primordia have  
retired

310 spores long ellipsoid  
7.5-8 x 3-4 g.p. eccentric

5.10 Cap. Leptomeris

Asci Spores 16-17 x 5-9 with margins  
start lines - cracks - some short verrucate, others  
hyaline yellow-green with prapyses almost smooth

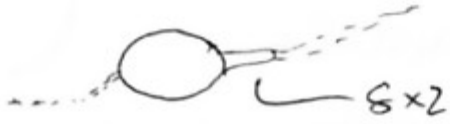

much like 130-160 x 22

just like a fingerprint.

16.10 Cap. leptanens check Spores wrong size  
imm Pod Setosa? Cap. sp

23.10 P. setosa erect setae Sp 16 x 11-10  
-16.5
