

21.9 Sporormiella 4 ER Short stalked asci
ca 130 x 30 sp 41.5-45 x 9.5

australis ✓

Sporormiella 4 ER asci 100 x 16
-115

Spans 29 x 5.5-6. diagonal g. slit

± cylindrical spore, hairy

minima ✓

Sporormiella 4 ER Spores with tapered (rounded) cells. All cells more rounded than minima
2 middle cells shorter than apical
30-32 x 9 g slits variable - some parallel.

asci with tapered foot cymbomera ✓

25.9 R. polysporus ✓ Sp. austris ✓ Sp. minima ✓

28.9
3.10. Sporormiella T celled, cells rounded, deeply

Constricted at Septa 51.5 x 10
diagonal brown slits - var linear in terminal cells.
Asci 160 x 30

3rd spore cell largest. americana ✓

Schizothecium S. sp miserabile sp 19-19.5 x 10
Scales limited to rugosity on back verlicca ✓

Delitschwa

Spores frond elliptic

64-74 x
19.5-22.5

on square perithecia ring of dark
plaque and red Chodocora ✓

8-10 Schizothecium Small rosette as leaf

Asci 290 x 35-40 16-spored.

Spores 25.27₋₂₈ x 16-17

14 x 24 appendages indistinct

:- in ascus

cf dubia ✓

perithecia ca 700 x 400

18-10 long narrow theca - imbricate Thecopsis ✓
Bambusa ?

Sch. dubia ✓

Delitschwa

67-74⁻⁷⁹ x 21-22.5-24

frond, fragmenting spores.

Seriate nature not seen

Chodocora ✓

23-10 Coprus filamentifer ? check over name

Sch. dubia ✓ (same with 8 n. & 8 n. spores)

Small white minute apothecia - Coprus 250 diam

sp. biseriata 8-9.5 x 5-5.5 ellipsoid, hyaline

Asci 110-120 x 16 - parallel bodied of straight 3 wide cf. lacteus ?

29.10

Sch dubia ✓

Finaria / Thecateris type apotheca grow in
develop. Long cylindrical ca 1mm deep x 0.5 diam
purplish, fringed?

Spores ellipsoid, smooth 12.5-13 x 6.5
uniseriate. Paras v. st. capitate.

K₁ -ve Asci not enlarged above hymenium
check if spored? Asci ca 170-180 x 10-11

4.11 ~~Spores~~ sphaeroid veil - sh creamish brown,
not pure shiny white like ster/uv

Sp. 4 T 45-48 x 11-11.5-12
-5.5

tapering long fringed ascii parallel g. slits
deeply embedded / fragmenting Fraxipora ✓

Sch dubia ✓ Sp. minima ✓

Finaria basically 8-spored but in many
asci only 4 mature. Apothecia 1.5mm high
spores 12.5-13.5 x 8 x 1mm diam
hymenium / ascii 190 K₁ -ve St. magnate
purplish

12.11 grown under log - up to 2mm diam.
± conical tapering to base. Ascii 8-spored
Spores 14.5 x 8 ? cervaria ✓

Cop Schloss

Cop Sphaerocysts - some branch - red inter-cystal
network - not sure whether hyphal or
external deposits ?

Sch dubium ✓

Coprows pale-flesh < ca. 300 diam x 200 deep
Spores basinate Asci cyl-clavate 140-150 x 22-24

Pass fine, circinate, body enlarged at tips
sp. 12.5-13 x 8-9 cf. dextrinoides ?

16.11 Cop Schloss ca 2mm diam x 3mm tall,
pale cream, dorsal ochre/red brown bands centre. st/lt
unexpanded.

20.11 White Coprows ✓ Asci clavate 140-150 x 30

Cop. Schlossi spores small ellipsoid 6.5-7.5 x 3.5 ○
apical gp. pellucidus ?
check cyclosta.

Sch dubium ✓

24.11 Sp. minima ✓ Sp 4-5 x 11 tapering asci,

rounded spore cells, 48-51 x 11 parallel g. st/lt
Sch dubium ✓ fradespora ✓

look for Schlossi to name to check cyclosta.

Dried 26.11

26.11 Basidia 4-spored, to facial cyclosta Pellucidus ok.
