

3.12 -

6.12

Pilaira Spores pale ellipsoid 9-13 x 6-8

10.12

Piptocetrans lessemani x Woreau x
dry, brown

dist. de-gal. large funnel head cell.

15.12

P. lessemani ✓

Ascozoms woolhousii x sm 55-65 x 19-22

Sp. 12-13 x 4 Setae < 50 long

K₁ - ve.

20.12

Cp. stewartii x

A. woolhousii ✓

Volutella ciliata x Sp. 5 x 2 Setae thick-

walled, Septate < 110 long.

21.12

Sch. telosporum x 4-sp 20-21 x 12-12.5

Thel. ramosa x

Asc. woolhousii -

Cephalosporium pure white 'firm' looking asc, 200-300 diam

8-sp. bisexate Sp 11.5-12.5 x 7-8

Asc cylindrical 80-90 x 16.

Paras fine, var equitete, circinate ✓

Ascozoms ramosus x Asc 125-145 x 57-65

Spore ball 64-70 x 40-50 spore rounded broad

Sp. 12.5-13 x 5.5-6 - larger than other collector

Spore typically rounded - all radiates from central part

6.1 Cap steremors ✓ Sch. Lehmann ✓

White apothecium ca 2.50 diam

Asci ± cylindrical ca 60-70 x 8-9 KI - ve
no apical or opercular spine seen

Spores basiconic long cylindrical, beak-like,
ca 12 x 2-3 (?)

10.1 Cap steremors ✓ Sch. Lehmann ✓

Ascozoum white, marginal hairs rough,

smaller or rot. below. Asci with rounded apex,

rot like A. woolhopeana. Spore mass rot fused

like A. w. Spores are ellipsoid, rather thin

fused. Asci 90-100⁻¹⁰⁵ x 22-23-26 Spore with (16?) same

with wall < 32 - Spores. 10-115 x 6

excipular cells ± pygidial - same < 10 x 10
no base of perithecial cells.

appears gr. brownish ca 2.5 long.

could be parusporus or crovarii?

asci appear to be operulate - could marginal

hairs be paraphyses - seem to be in

hymenium as well?

14.1 Cap steremors ✓

Ascozoum? 32 - spored rounded spore

10-11 x 4.5-5

definitely operulate. 5 KI - ve

pellet kept

Discarded 14.1
