

W58.00, S51.70. Coll. T.W.E.; Incubated 16 Mar. 2002

S9.1? S1.8?

19.3 Pilobolus spores ellipsoid, yellow 8-10 x 5
Crystallinus ✓
Sporomella 4ER 32 x 5.5 asci 85 x 16
minima ✓

20.3 P. crystallinus ✓ Sp. minima ✓

12th

Yellow-green white apothecium Ascomata

spores with unilateral gel, only (or 2)

linear furrows visible

15-16 x 8
-17.5

Paraphyses yellow green, v. dense

Asci ca 300 x 20

cf michardii ? ✓

Ascomata / Podospore

4 spores — large thick immature

21.4 Cep. stercorarius ✓ Sp. minima ✓

Podospore antraxi ✓ 4-sp

51-58 x 25-26

Yellow Ascomata as above 16-17 x 8-9

1-2 furrows

michardii ✓

Podospore multispored sacculate ascomata. A few non-egg-like
 fibrose hairs at neck. Spores 16 x 10-11

ly app ca 8 x 2, indistinct when mature, ± cylindrical
setosa (see 29.4)

29.4 Pod. ripua Sarcate, poly-spermed

Ascus 290 x 140

128 spores?

Sp. 17.5-18 x 11-11.5

flexuous hairs on upper pentagonal body and
slat erect ~~setae~~ at vertex, beginning to
aggregate Setosa ✓

Pod. antraks ✓

Podospora conium ✓

32-34 x 17.5-21

4 secondary appendages in app ca 22 long
x 4-5

3.5 Cap. str. emers ✓

P. antraks ✓

P. setosa ✓

Dried 3.5 with P. antraks & P. setosa
