

W16.15, N28.58. 615 m. Incubated 15.11.02.

- 15.11 -
12.11 Pilaira hyaline pale 9-11 x 7-8 ✓
24.11 Sp. 4 ER 54-61 x 11.5 moreaui
intermedia ✓
29.11 Saccobdus 3+3+2 Asci 110 x 26.
S.m. 29-31 x 16 spores fused, rough
12.5-13 + 7
depauperata ✓

Schizothecium 4-spored, good Scales
Sp. 19.5-21 x 11.5 tetrastomum ✓

Sporomniella 4 ER 51.5 x 10

Asci 180 x 29

intermedia -

8.12 Heliospora hemisphaerica ✓  19-22 x 11-12

Sen. tetrastomum ✓

Saccobdus ✓ as above

18.12 Sp. intermedia ✓

Saccobdus ✓ sm 29-32 x 11-13

Sch. tetrastomum ✓

spores deeply minutely verrucose
12.5-13 x 6.5-7 depauperata

Sch. Delatense ✓

asci 32-spored 210 x 35

14 app 6 x 2

19.5-20 x 12.5-13

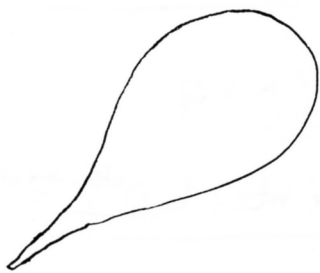

v. small inflated scales at neck.

26.12 Sacc. depauperata ✓ Sch. tetrasporum ✓

31.12 Schizothecium asc: 270 x 35, clavate
32 spored, brownish above on rock &
limited small inflated scale-cells in ring
around neck just below ostiole
Spores 19.5-21 x 12-12.5
but hairiness not right? dactylospores ?

9.1.03 Sch. tetrasporum ✓

Black Clavothecium, spherical, excidium
dark walled polyhedral / square cells Perissia
asci clavate, 5 killed ca 20 long.

80 x 23

Spores 4 celled, really fragmenting
w intact free spores seen

triangular units 8-9 x 6-7 some triangular
overall ca 26-28 x 6.5 (terminal) & 8-sided
(intermediate)

22.1 Old asymmetrically spiky perithecia? vulgans

Sp. 4T Parallel g. slit 29-32 x 7

Spores with v. st. conical terminal cells

Asc with long tapering base

if cyundonema ?

Perissia, vulgans ✓ spores mostly fragmented

Schizothecium

32 - Spred

Sp 21 x 12-125
-22.5

Asci ca 280 x 48-60

Perithecia w/ hairy, typical, h/ reduced,
Schizothecium Scales at neck dactylotene

Sch. tetrasporum ✓

Sacc. depurpuratus ✓

Trodolobites chus

Sp. 19-21 x 6.5

w/HL proximal g. pres

monkii ✓

Scales < 11.5

3.3 Sporomella 4T short-leg flexors stalked asci

27.5-30.5 x 6.5

Cymatocera -

Sacc. depurpuratus ✓

Dried 3.3
