

Incubated 26.3.03. W3.32 N56.19

27.3 - 31.3 - 8.4 -

12.4 18.4 24.4 30.4 -

7.5 small smooth black Hecia ca 65 diam. no content

layer mycelial - hairy Hecia - hairs up to 300
 long sticky brown below, I mycelia towards tip
 Hecia wall dark brown. No content

11.5 240-275 diam black Hecia, hairy, sparsely, < 550 long
 no differentiated contents

● 18.5 Abundant black hairy cleistothecia, with base
 < 550 diam. hairs spiral, with uncinat tips
 8-10 wall, dark grey, pale towards the tips.
 aseptate. Spores grey, linear form 16 x 12-12.5
 Asci clavate, ca 80 x 20-25 ✓

Chaetomium

26.5 Same spores large < 19 x 12 asci clavate 8 sp.

● hairs not aseptate (none seen over long lengths)

6.6 Chaetomium ✓ sp. 14.5-18 x 9.5-12.8 bipolar g.p.
 mostly broad lineariform

Smaller black cleistothecia asci globose 12.5-15
 200-275 diam. diam

No free spores seen but reddish brown

(matres?) spores in asci (quad?) angular
 nodular  6 x 6

Dried 6.6
