4.5. Delitzschia white nest-hole on neck road

ostiole. sp. uniseriate 4-56 x 27-27.5

interi ✓

Ascobolus apothecia purple brown 1-2 um

diam. excipulum with scales of 4-5

cells dark purple. spores 

22.5 x 11-11.2

5.5 Sch. leucosporum ✓ 4 sp. altitud. was gregarious as I have seen it. roseopurpureus
16-19.5 x 11.5-12.1

Ascobolus purple ascid apothecia. No pigment

in paraphyses or between them. Purple

colour due to excipulum cells. Spores intensely

purple sp 22-23 x 12.2-12.8

Thelethia polysporous ✓ imbricate Sporomeltha

sp. 4 ER 58-55 x 11 intermedia ✓

oblonge Sigmoid germ slit Ascii 175 x 26

7.5 Delitzschia (pellet 10) a 27]

pellet 27 - white cylindric spatulate based on 1.5 um
overall x 180 diam below = slope x 270 above = head

stipe cylindric < 65 long / homobasidio. 4-spored

Tuphula viluigera det RW imbricate -

[60] Deltschka ✓

58 x 29

gel 8-10 wide

11.5 16 28 ✓ ✓

Pod pleurospora ✓

immature

16. spores

Deltschka ✓ (16) (45) (52)

15.5 Pod pleurospora ✓

Deltschka ✓

20.5 Abundant Deltschka ✓

26.5 Ser. tetrasporum ✓ with

Hormoscentra ocypha ✓

1 perithecia sized with ca 10 apothecia, 200 diam.
Spores ellipsoid, uniaxial 6 x 3. Sparsely ciliate at margin

Sp. intermedia ✓

Deltschka ✓

5.6 Immature Comochloa hansenii ?

serae confined to red < 80

Deltschka ✓

Pod pleurospora ✓ 16 sp.

35-38.5 x 19-19.5

Ser. tetrasporum ✓

11.6 Pod. pleurospora ✓

Hypocrea black velvety surface to stroma —

relatively extensive spores symmetrical 26-29 x 12.5-13

uniseriate. No sign of second cell in mature or immature

spores germ stalks 20-22 long. Apical

plug red/brown in KS

fits pleurospora better, but not obviously fit either.

cf Stephanopora ?
pleurospora

19.6

Vibella chelo ✓

Dehtschwa ✓ winter

Pod. plerospora ✓

brassh selecta. No contents - but some
large sp. fragments present x 4 = 65 m.
on pellet 10.

28.6

Pod. plerospora ✓

Codoplasma Cervetti ✓

22.5 x 12.5
13

Trochodelitscha

sp.

19.5 - 20 x 8
- 21

9.7

Dehtschwa winter ✓
