

W3.55, N53.84.

3.8

~~Asporium~~ ampullaceum ✓

plenty in secke at

beds, mostly not inflated, pale tanish tip
separate, up to 90 long

Irregularly directed pedicels, with glumes on some
after release. (see Lugant).

spores 35-38.5 x 17.5-18

pedicel 24-27 x 2.5-3 wide.

Asci head 37-40 wide x ca 170-180 long
3 good pellets remained for E

6.8

Sordaria

Sp 19.5 x 13-14 thin but
-21 clear gel.

finicola ✓

Trichobolus ~~name~~ ✓

Pilobolus

spores pale yellow mass 8-9-11 x 6-6.5
yellow ✓

concolor

Pilobolus

spores subglobose to slatly elliptical

8 x 6.5 — 5.5-6 diam.

and some large, irregular spores < 14 x 7

~~name~~ ?

13.8

Podosordaria Wasmannii / Stromatol parvulus

Telethorax microsporus ✓ small yellowish-green apothecia

Asci 65 x 9-10 sp. biseriate 8 x 4

poor green capitate to 6-7 diam

Asporium ampullaceum ✓

Sch. telethorax ✓

Podospira deepsii ✓

8-sp.

35-38 x 19-19.5

Thel. rows ✓

Coniochaeta

spores ± ellipsoid 11-9 x 6 x 9

crowns ~~off~~ of stalk setae at neck < 45

Check when more material

Leucophaea ?

20.8

Caprim strawii ✓

Taruletschia

22.5-25.5 x 8-9

setae up to 160 long.

hospites ✓

Asorbis immersus ✓

ascom 95 diam 8-sp
x 650-700 long.

Spores 48 x 27

st. smaller than oval

with everything else etc.

Podospira

Rhynchiza type perithecia + asci

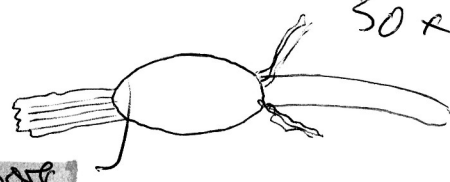

64-spored?

Spores 24-27 x 16

pedicel
30 x 6

Asci frond

ca 320 x 48

hypospore

Pod. decipiens ✓

Schizotheca

f. sp., uniseriate

16-16.5 x

10-10.5

ment: A

small scales

Vestibula ✓

Sporomella

8 celled

48 x 5.5-6.

all cells

I Same and

asci 160 x 19

Same sized.
