

25.6 - 28.6 Ascobolus albidus ✓ sp 22.5 - 24 x 11 - 11.5

Trichobolus nanus ✓ single ascid 'destrucaps'
60 spm

Pilobolus kleinii ✓ deep stage spores, 12.5 - 14.5 x 8 - 9

1.7 A. albidus ✓ T. nanus ✓

7.7 glauvus Coprinus plicatilis A. albidus ✓

Schizothecium good cover of scales, ± immersed
bisporate ± 22 - 22.5 x 11 - 11.5 still imakt
— See later W ✓

Psittacium immersed dark red, thickest h22 — imakt

Ascom / Pod? desipiens ✓ 8 sp. 38 - 42 x 21 - 22.5
pedicel < 6 < long. apical app 19 - 22

T. nanus ✓ Asc. stricklandii ✓
sp 29 - 32 x 17 - 17.5

9.9 A. albidus ✓ Pinkish mycelial growth forming up -
might be Selinia developing?

glauvus fine filamentous veil Coprinus - spores v. dark
ellipsoid 8 - 10 x 5 - 6. vermicularis ✓

P. desipiens ✓ Sch. conicum ✓ goro scales 27 - 29 x
12.8 - 13.5
1 - 2 seriate

Sch. ✓ smaller spores as 7.7 1 - 2 seriate 19.5 - 21 x
limited scale development. vesiculata ✓ 11 - 11.5

13.7 Cap. verruculifer ✓ Orange stroma becoming white firm

Pod. decipiens ✓ f. sp. 35.5 - 41.5 x 19-21

Asci < 70 when expanded x ca 275 long

H. stichodermis ✓

6.8 Cap. verruculifer ✓ Orange stroma firm, but with

no internal structure

Stropharia permodum?

Sch. conicum ✓

Pod. decipiens ✓

L. caninus ✓ sp. 20.5 - 22.5 x 11.2 - 11.5

Sch. vestigiale ✓

15.8 Sch. conicum ✓

27.8 "Stropharia" brownish yellow cap with reticulate coils
cap not expanding. Some purplish spots on gill

13-14 x 7-7.5

Yellowish ill-defined

part of abnormal development ✓ cells present on gill edge + face, cystidia?

Ok for P. meridiana

Discarded - in poor condition 27.8.
