

20.9

Hypocrea ✓  
① Single lateral branch, with white  
ring and ostiole Spores asymmetric, fusoid  
24-26 x 9.5-10 to second cell.  
g. slit 14-15-19/1 pore 10/1 brown-red

Sordaria alvina ✓

Sp. minima ✓ GER having + fragmenting spores  
30-32 x 5.5 g. slits & ostiole to ± parallel  
occasional apical cell tapered

22.9 Trombidolites ~~minuta~~ ✓ sp 16.5-19.5 x 6

Sord. alvina ✓ asci 220 x 14-16

27.9 Sord. alvina ✓

Cephus small white primordia. Vel limited, rare  
Canabli than verm/fil type. No expanded caps.  
hl spores 6 x 4 ellipsoid, v. dark.

pseudodactylis ✓

8.10. Sp "minima" ✓ as above spores ~~rather~~ small? [cf other samples]

asci slender, tapering to base 13 wide x 125-130  
spores 32 x 4-5 varying terminal cell  
morphology (tapered - rounded) + g. slit ± straight to sl.  
ostiole. Pseudostium relatively large

Sord. alcinia ✓ 19.5 - 22.5 x 9 - 9.5

12.10 Hypocrea chaneper ✓ S. alcinia ✓

Sp. '4T / minima' ✓ flexmetapered asci

Coniochaeta ♂. sp. discoid 8 x 6 x 3.5

found at Setra in upper half of fecim,

< 20 log.

Leucoplaea ✓

26.10 S. alcinia ✓ T. munkii ✓

Sp. 4T as above

4.11 Mycelial strands + Psathyrella ✓ ✓ primordia ✓

≡ Pan. olivacea  
det R.W.

24.11 Psathyrella ✓ primordia S. alcinia ✓

Coniochaeta ✓ small spored as 12.10

8.12 S. alcinia ✓ T. munkii ✓

Dried 8.12  
with S. alcinia, T. munkii  
+ Pan. primordia
