

Grouse [spruce]. Kluane Lake [nr Aindee Lane], Yukon T, Canada 92/04
W138; N61. 24.7.04. Coll. student of D. Srivastava, inc 11.10.04. [Aimee Peletier]

11.10 Abundant dark Thelohar - type apothecia.
not made of Sporomniella?

13.10 Sp. immature

Thelohar gregarious golden brown excipulum

dark edged-rim. Apothecia < 150 diam

8-sp. hyaline, sterile

Asci 50x10

7-8 x 3

Perithecia some 8. circinate,

Asci capitate, no conical contents.

Microspores?

20.10 White apothecial perithecia

Sporomniella

immature, thin tapered asci 4-celled.

Thelohar ✓

Asci 125-130 x 12-13

sp 29-32

25.10

Sp. sporomniella

as 20.10

sp 27-29 x 5

Lepraria ✓

Basidiomycete

hyaline

spore

9x5

white stibaceous - type fruit body - gelatinous in
appearance. hyphae with single clamps.

3.11 Sp. 4T ✓ as above

Sp. 8R

densely

crowded asci, extremely long (ca.

200) tapered spores to
densely black thecal

asci. Asci

(6 wide)

(Side)

Spores multi seriate 41-45 x 5

Frond 3.5 lbs

~~Locs like bipolis, but~~

no sign of halting?

Ochromera

23.11 T. microspora ✓

Sp. 4T as before
fragmenting

Sp. 6-R unist asc: 145-175 x 16, long tapering

stalk, clavate.

Sp. 39-45-45 x 6.

no sign of halting.

Strob

Ochromera ✓

7.12

Sp SR ✓

Sp 39 x 6-7.

Cell 3

st. longer than others

Sp. 4T ✓

Dried 7.12 with 2 Sp spp
