

14.10 Sp. 7T Sp with tapered terminal cells  
 layer than wide, 5 intercalary cells shorter than  
 wide sp 42 x 6-7

nearly breaking up.

Yokanis ✓

20.10 Sp. 4T Sp. 4T

tapered asci 33-35 x 5.5-6  
 g. slits parallel. apical cells tapered

Asci 16 wide

Asciulation on the ascus

Lepirina ✓

25.10 Sp. vexans ✓ Sp. fragmented.

Asci 128 x 19.5 sp 35-42

Sp. ✓ 4T sp 35 x 6 Lepirina

5.11 host pellets with imbedded ascus, with surface emptying

Sp. 4T as above

sp 35 x 6 basenote - having in same ascus  
 parallel g. slits - st. oblique.

~~Lodipans? imbedded~~ not seen again at recorder

23.11 Coprinus Canadensis sp 7-7.5 x 4  
Pseudoneurospora ✓

Sp. vexans ✓

Sp. 471 halving as before. halving + disarticulation  
Hypocopa imbricata also leptocopa

7.12 Hypocopa white oostode curved, but also  
sae. After masses of spores, pinkish interfing.  
(mentioned in NM I)

No wake spurs

14.12 Sp. pseudorad-atri parvula Sp. leptocopa

Hypocopa sp. 24-285 x 9.5-10

v. st. asymmetrically ellipsoid. occasional hint of

2nd cells in some spores, not very convincing.

germ slit almost full length

in imbricate spore not visible in dark space

pure detritus in KI no hnc

Champsis ✓
