

- 13.10 20 ⁷ fragmented Sporangia → Ascomycetes
- 20.10 " " " " White mycelial strands
 on one pellet - No clamp.
- 25.10 Setae Azim, setae < 35 prominent g. pore
 sp 19.5-21 x ~~6.7~~ 8
 6.7 brs pores (minute)
- 5.11 ~~White clamped mycelial strands.~~
Furcula deltschii ✓ fragments
- 23.11 Prominent spiral myxo sp. golden, irregularly
 glaucous 12.5-19.5 diam Capillitium like
 steel barrete reinforcement rods  brown, 3 wide
- Schizothecium? 16-spored broad ellipsoid spores
- Ascoms 22.5 x 55 brown long perithecia
 sp. 22-24-25 x ¹⁶⁻ 17-18 no pedicel or appendages?
 no apical strand to  6-7 x 2
 ascus. no sign of apical spores in hila-int. perithecia
 freely flying post spore sp.
- Camrochadon S-sp. clearly ascoid - subascoid
 S. 5-9 x 7-7.5 x 4.5 laruplaca ✓
 setae at base < 35

8.12 Schizothecium ✓ as before

Coniochaeta ✓ as before

Dried 8.12 with 16-sp.
Schizothecium
