

18.11 T. zokalii 300 - 330 diam. hyaline setae
 septae, up to 520 long, septa 20-32 apart
 1-3 basal cells shorter + broader
 wall ca 2 wide
 spores broad ellipsoid 8.5-9 x 7

zokalii ✓

White apothecium ca 320 - 400 diam.
 Asci cylindrical 80 x 8-10 spores ellipsoid,
 hyaline 8-9 x 4.5 - ~~5~~ 6. pores base,
 narrow, with capitate 2-2.5 wide

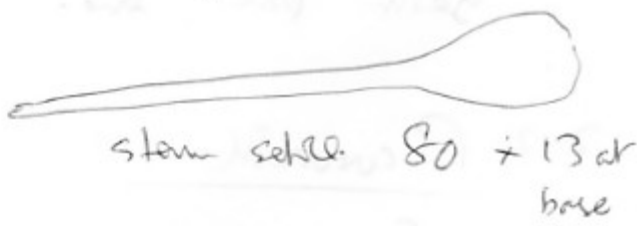

Uniseriate

Caprotus ✓

18.11 Caprotus as above.

T. zokalii ✓

Caprotus pyriforme dark Sphaerocystis ✓ settles on
 Cap. settles a stem

heptemeris ✓

5.11 AD Cop. Leptoneura

Sch 8-sp 1-seriate

21-22.5 x 12-12.5

good scales

AD Asciobart

crenulate - toothed

margin to

apithecium. Spores 9.5-12 x 6

Some greenish tinge remaining

Chaetomium loosely coiled rough hairs, with

spores. Sp. grey biriform 6.5 x 5

Chaetomium

Podospore asymmetrical bifid setae. to form
asci to make spore no. estimate

spores 14.5-16 x 9.5. Secondary apps not
evident in setae. Pedicel complete

body of sp. v. sh. tapered towards
germ pore end.

Curculia

12.12 P. curculia

18.12 Cop. Leptoneura

Sch 8-sp, large mass of scales

uniseriate 19.5-21 x 11-11.5

Chaetomium as 5.11

Discarded with Chaetomium 18.12
