

11.8 ~~Podospira appendiculata~~ ✓ ~~Concocheta lignaria~~ ✓

black tinea with elliptical Sordaria-like spores  
 - no asci, lot with right - chela when fresh  
 material sp 14.5-19 x 8-9.5, no papilla, no gel.  
 no germ slit

15.8 Concocheta 15.5-16 x 9-9.5 x 6-7  
 (HERB) lignaria ✓

P. appendiculata (HERB)

19.8 P. appendiculata ✓ Con. lignaria ✓

26.8 Con lignaria ✓ sp 14.5 x 9.5 x 6.5  
 dense crown of slit setae at neck < 35 long

P. appendiculata ✓

31.8 Con. lignaria ✓ P. appendiculata ✓

24.9 Con. lignaria ✓

2.10 Con lignaria ✓ P. appendiculata

Sp. 41 x fragment half-spore 30 x 9.5-10

≈ a 60 x 9.5-10  
grubspora?

9.10 Psilocybe / Shyph x rhizoids gelatinous outside

P. appendiculata - Con. lignaria -

2011 Can. higniana ✓

Keep to check Stephanie Carter - current specimen in poor condition

30-11 Still not properly developing - no spores appeared to have been produced. Spores with no mycelium, silky white. Coprophila?
