

W23.652; N64.752. 5.8.06. 47 m. Rough pasture. Incubated 9.8.

11.8 Extensive + gregarious Pseudomphalia. Lilac,
with darker rimmed rim, ad paler fringe.
Apothecia up to 1 mm diam. Hymenium 200 deep
Asci 190 x 13 sp smooth ellipsoid 17.5-18 x 9.5
peres abundant, filamentous 2 wide cervaria ✓
lot much interparaphyseal pigment in fresh
material, so looking clear lilaceous. Older material
more darkly pigmented, but otherwise identical.
Excipulum of ± square/rectangular cells, purple
brown, ca 15 x 10

Telebasidia polyseriate ca 64 spored, 6-8 x 3-4
> 5 asci, clavate. sterile ✓
Microspores ✓

Lasiospora ~~pruina~~

15.8 Coprinus lamellatus sp. 11.2-12.8 x 6.5-7
check basidia 2 of 4 spored? red disc ✓
4-spored with pleurocystidia

Sordaria fimicola ✓ sp. 16-19.5 x 9.5
-20.5
good sel. Asc: 105-160 x 16 slide

Pseudomphalia asci 190-200 x 11-13.
sp smooth ellipsoid 17-16 x 9. peres base, hyaline, cylindrical
filamentous 2 wide. Apothecia brownish of lilaceous spot
of /06? cervaria ✓

Telebdr microspars ✓ 8-sp branched ball apothecia

asci 46-50 x 9.5-10 sp 9-10 x 5

Asc. furcans - type spores 27-29 x 12 

- old apothecium present.

Sprayed - same larval activity

17.8 Cap. radialis (H) Larva inactive.

21.8 Cap. radialis ✓ sp. 12.5-14.5 x 8

± White, Campanulate cap 20 diam x 17^{mm} high.

pale cream Stem silky stem 10cm diam,

4 spaced, yellow white with cobwebby veil ⇒ ring/zone
- not nearly so. Not viscid Gills not webby,

sp black   16-19.5 x 10 walled

facial cystidia  50 x 20, some pointed

gill edge ^{pale} cystidia sometimes bifid, st- capitate

- rounded projects 150 from edge. 6 wide, 

wider below. veil still bridges gap to stem -

does not look as if there will be a ring/ring zone

25.8 Cap. radialis (H) P. semiovatus / antillarum ? ✓

Sch. west. etc P. antillarum hulphii check for ring.

8-sp. - small scales 20 x 12.5-13

check not small ed of con. an

27.8 P. antillarum semiovatus (H) ring in air, considered from

Cap. radialis (H) antillarum (H) cap edge, 4 dies from stem.
