

6 m. Cliff top, rough grassland. Incubated 9.8.

11.8 Small brown-named apothecia 200 diam

8-sp, 8-10 x 4

Thelobolus microsporus ✓

no sign of paraphyses

Ascobus albidus / furfuraceous spores present ✓

Schroeterium 8-sp. 19-21 x 9.5-10. poor scales

11.8 Cop. cordisporus ✓ - check spores

9 x 9 x 6

OK

See below

Schroeterium perithecia 480 x 275, 1 no scale

8-sp 21 x 11 - 11.5 I inside

verticilla ✓

19.8 Cop. splendens ✓ caps 2m diam. stipes 1 1/2 m tall

stipe with ring sp. 8.5-9 x 8.5-9 x 5

Coposporus miser ✓ sp

[Check for cordisporus some perithecia present? - too brownish for splendens?]

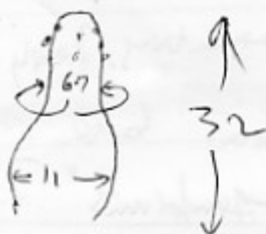

Stropharia / Psilocybe brown small complete caps, 5m diam.

spores no ring stipe 80 x 1 with

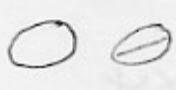

12.5-13.5 x 7

slimy stems. Cap dry

marginal cystidia verticilla below, rounded apically, with tiny acanthidia. No pleurocystidia?

Ps. coprophila ✓

Courochale perithecium small 120-80-
 210 x 130 diam
 asci 80 x 8 sp. sub discoid - ellipsoid
 8 x 6.5 x 4.5  Setae scarce,
 up to 15 long, blunt. leucoplaca ✓

CHERIC ANSIDUS / AUREA from 11.8

21.8 Ps. coprophila ✓ Cop miser ✓

22.8 Cop. miser ✓ for HERB Cop. crossspms ✓ etc

Sch. westicola ✓ no rings

20 Lakobius - Setae thick-walled < 260 x 26
 sp broad ellipsoid 21 x 12-12.5
 -21.5 below
Cilobus ? ✓

Hypocrea parvica ? pale ground to dark
 orbolar spot.

26.8 Cop. crossspms ✓ Hypocrea not yet made

Pedocypa depress ✓
 8-sp 38.5 x 19-19.5 parva ? ✓
 8 wide, small pale blue ink

28.8 From spine out up to. Look for conformation of Asc. albidus

Sp. 4-11 42-49 x 9.5 fragmentary, deeply septate
 asci tapering to narrow base
"Lageniformis" ? ✓

(make perithecium with shaggy, unidirected aggregated hairs check?)

31.8 Cap. codispans ✓

Aschobius Epine

Small white ~~to~~ to

22.5-24 x
11-11.5

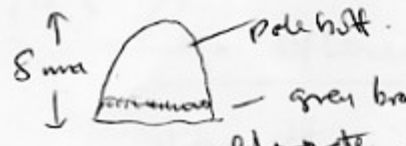

with distinct black sedge <100 long. Theoretical
body 200 diam, translucent, not dark opaque.
immature.

H. paula ✓ immature

through search - vs
signs of large hyphae
apothecia seen. Spore size not
likely from albidus

Panicostus /

3.8 Psilobolus? immature Stage pale cream 1.4 cm x 4 cm, with
brownish gills - no spores
fraglets. Cap capitate, with pale innerved edge, + 2/3 cm high
just above. 1 cm diam, most but not gelatinous

Gills with white edge from cystidia, <50 long.

Cap white cellular, with "cystidia" - hairs 30 x 5

4-sp. hexagonal 14.5 x 9.5

papilionaceae X

249 sprayed for larvae

Con. leucoplaca ✓ sp. ellipsoid 9 x 6 x 5

Psilo. priscorum X Con. saligera sp 19-20 x 16-17 x 6-7

Con. setacea X sp. 6 x 4.

2.10
9.10

very larval. Sprayed

Sp. 4T ✓ parallel g-clit, relatively narrow

58 x 8

↑ 1 spine unusually large + tapered terminal cell

not stated + rare rounded terminal cells
41-45 x 8

Conochilus Scatger ✓

Discarded 9.10
