

Sheep. Apollonia - Kastro path, by Aghia Parakeyh, Sifnos, Greece. 11/07
N36.98; E24.74. 17.5.07. coll. BAR & KB. Incubated 24 May.

26.5 - 29.5 Pilobolus v. pale elongated,
8-9 x 4.5-5 crystalline

36 Lesrobolus annali ✓ P. crystalline ✓

7.6 Coprinus sebosi with spherical spores
immature - check Leptomeris later.

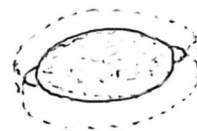

166 Pedobolus Resnei ✓ stromata
P. crystalline ✓

Recottaria pale procellate apothecia
0.75 - 1.5 mm diam protruding asci

spores rough spiculate

25.5-29 x 16

+ spores
2-3

lundquistii ✓

~~Peziza~~ Arxium

asymmetric left of setae, U-shaped

sp 48-49 x 24-26

Asci with thick

tapered feet

arizonense ✓

Sedusia small spored? 19-19.5 x 9.5

Asci 160 x 13
typical angular excipular cells

limicola ✓

Coprinus

spores ca 6 diam. hexagonal-rounded

net of thin walled hyphae, covering smooth globose cells, globose cells with setae-like extensions.

filamentifer? ✓

22.6

Necotrys

2.25 mm diam - pale,

slender white sp 30.5-29 x 14.5

Asci 1/2 +ve.

lunansii ✓ (H)

Pilobus crystallinus ✓

Coprinus pruina as above (16.6)

Ammonia arzaenae ✓

4 sp 48-51.5 x 22.

long stalked tapered asci 350 x 32-35
Sparse setae at neck + ostiole, tendency to fold

29.6 Podosordaria ✓

Necotrys ✓

Pilobus crystallinus ✓

Chedamin

Spiral hairs

Asci clavate

spores uniform, dark grey 16 x 8.

hairs reddish brown, rough,

under transmitted light

furisporum ✓

Coprinus

5.5 x 4

no other features left.

16.7 Podosordaria ✓

P. crystallinus

Chedamin as 29.6

Schizothecium

good scales at neck - plenty but

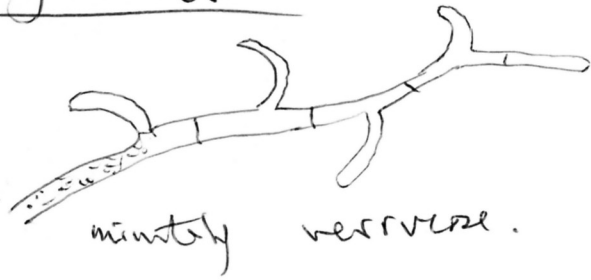

well developed.

spores variable

19-24 x 11.5-13

8-spored but not all maturing

Gymnascus

slightly verrucose.
yellow flocose detritus

Asci 8 diam
sp glob-ellipsoid smooth
4 diam

messia ✓

Arrium arizense ✓

Schwarzsteiner 8-sp. poor scales sp 19-20 \times 9.5-10
vesticaria

24.7. Schwarzsteiner

G. messia ✓

Tecostera

30.5
sp - 32 x 15 - 14.5 longistia ✓

Also pinkish hyphal mass, near Gymnascus

FB, with irregularly globed bodies,

no characteristic hyphal strands ca 10 diam

Dried 24.7
