

28.2 Cercophora immahe.

Podospira large 8-spaced immahe longicaudata?

Podospira 8-sp biseriate 32-33 x 17-18

apodemes not completely clear - mostly still  
immahe, but possible 4 apical e.g. Cammiis?

3.3 Small Saccharis apterae ca 200-300 Exam

Sm 30-32 x 12.5-13

Sp 12.5-13 x 6.5

sp. varied Arrangement not clear 3+3+2?

Podospira cammiis Ok. pedicels 25-29 x 4,

st. wider at insertion with colored cell

Sp 30-31 x 17.5

5.3 Saccharis Spine clusters not contracted or rounded.

Cercophora immahe

P. longicaudata not found released.

13.3 Ped Longi cardata ✓

Cercophara asci with apical globule

vermiform spore 50-52 long x 4-5 apperages  
eard 25-30 long.

perithecium wall small celled, not schizotecium,  
but minutely hairy.

16.3 Asc imensus ✓ trivada

Cephus trivada - brownish spherocyte.

No setae - some Canthi-type elements at margin

Cercophara Pedispored trivada vermiform

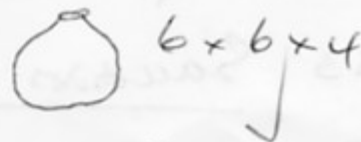

sp 50-55 apical globule

apperages eard, ca 30 long

Coloured Spore

22.3 Cephus cordispored 4-spored

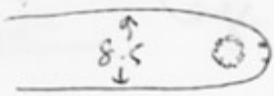

Cordispored

Cp. stercor trivada

Numerous Pedispored - rare with much spore

31.3 Cercophora ✓ with apical pole + glomule

dark cells present 14.5-16 x 6.5-7.5

thick wall brown  
flexose hairy

neck so pale that structure not visible

Saccobates ✓ old yellowish. Difficult to

notice at spore pattern s.m. 30-52 x 12

sp. rounded 12.5-13 x 6.5 ± smooth.

9.4 Cercophora ✓

19.4 Cep. streptocera Cep. cordispora

Cercophora apical glomule present. + apical ring.

vermiform spores 45-50 x 5

apertures appear round, 20-25 long

dark cells of spores 16-19 x 8.

6.5 Cercophora ✓ Ped. communis ✓

Discarded 6.5
