

N17.632; W63.223. 200m. Incubated 28 Feb.

28.2 Sparowella 4ER halving in ascus  
Lakes 11-16 x 5 Asc: 77-85 x 12.5-13

minima ✓

Asciobolus immissus ✓ piricola with

dark asc: 160-200 x 80-85, embedded  
in yellowish matrix. uncolored spores ellipsoid  
57-61 x 25-26

3.3 Sp. minima ✓

Pedopora immature

Asc. immissus ✓ S-sp 54.5-58 x 29-28  
-61

5.3 Cercophora Schizotetracod pentacium, with  
scales of <sup>inflated</sup> agglutinated cells or rods.

Asc: with ring at tip, but no apical globose  
dark cell (7.5-19.5 x 9.5-10  
veriform spores ca 48-51 long appendages not  
clearly visible.

Sp. minima ✓ spores halving 4ER 26 x 3.5

13.3 lanche Cercophora small pentacium  
to Pedopora (?) long dark pentacium, broad  
asci  
+ Cercophora with Schizotetracod scales pentacium  
See over.

Saccobolus 5 + 3 + 2 Ascii 80-85 x 20

Sum 32-34 x 12.13 Sp clear purple, minutely  
verrucose, ellipsoid 11.5-12.5 x 6  
to sl. rhomboid 

~~Sp. minima~~ lymbica < 400 diam ✓

deparvolutus

Sp. minima ✓

Schizothecium Cercophora vermiform spores  
38-40 long appodages apparently equal.

16.5 Sacc. 3+3+2 Small 30 x 10-11

Asci 65 x 16

deparvolutus ✓

22.3 Cercophora Podospored, apical glabrous

verm. spores 40-44 equal appodages

Zytophthora? perithecia 690 x 480 Small rectangular

mycelial thread cells. Possibly abnormal

Podosporea  
32 spored? — not uniformly 2-celled

not seen again?

Sacc. small yellow 4 x 2 Sum 32 x 10-11 ✓

Sp smooth 10-10.5 x 6

minima
